(54) Title: PYRIDYL-CONTAINING SPIROCYCLIC COMPOUNDS AS INHIBITORS OF FIBRINOGEN-DEPENDENT  
PLATELET AGGREGATION

(57) Abstract: This invention relates to certain substituted or unsubstituted pyridyl-containing spirocyclic compounds substituted  
with both basic and acidic functionality, which are useful in inhibition of platelet aggregation.

WO 01/30780 A2

PYRIDYL-CONTAINING SPIROCyclic COMPOUNDS AS INHIBITORS OF  
FIBRINOGEN-DEPENDENT PLATELET AGGREGATION

Field of the Invention

5           This invention relates to novel substituted or unsubstituted pyridyl-containing spirocyclic compounds useful as glycoprotein IIb/IIIa antagonists for the prevention of thrombosis.

Background of the Invention

10           The most prevalent vascular disease states are related to platelet dependent narrowing of the blood supply such as atherosclerosis and arteriosclerosis, acute myocardial infarction, chronic stable angina, unstable angina, transient ischemic attacks and strokes, peripheral vascular disease, arterial thrombosis, preeclampsia, embolism, restenosis following angioplasty, carotid endarterectomy, anastomosis of vascular grafts, and etc. These conditions represent a variety of disorders thought to be initiated by  
15           platelet activation on vessel walls.

            Platelet adhesion and aggregation is believed to be an important part of thrombus formation. This activity is mediated by a number of platelet adhesive glycoproteins. The binding sites for fibrinogen, fibronectin and other clotting factors have been located on the platelet membrane glycoprotein complex IIb/IIIa. When a platelet is activated by an  
20           agonist such as thrombin the GPIIb/IIIa binding site becomes available to fibrinogen, eventually resulting in platelet aggregation and clot formation.

            Heretofore it has been proposed to block these thrombus formation sites by the use of various therapeutic agents.

25           There is a need in the area of cardiovascular and cerebrovascular therapeutics for new agents which can be used in the prevention and treatment of thrombi.

            It is a discovery of this invention that certain novel spirocyclic compounds block the GPIIb/IIIa fibrinogen receptor, thereby inhibiting platelet aggregation and subsequent thrombus formation. Pharmaceutical formulations containing the spirocyclic compounds of this invention inhibit aggregation and are useful for the prophylaxis and treatment of  
30           thrombogenic diseases, such as myocardial infarction, angina, stroke, peripheral arterial disease, disseminated intravascular coagulation and venous thrombosis.

### Summary of the Invention

The present invention covers novel spirocyclic compounds having a spirocyclic nucleus formed from two fused rings sharing a common central carbon atom, which are shown in rings A and B in the formula (I), as hereinafter defined, and all pharmaceutically-acceptable salts, solvates and prodrug derivatives thereof:

having substituents and subscripts; X,  $R_{10}$ , m, n,  $R_0$  and  $R_3$ , as hereinafter defined.

Another aspect of the invention is a pharmaceutical formulation containing a novel spirocyclic compound of the invention.

Another aspect of the invention is a method of inhibiting platelet aggregation, inhibiting fibrinogen binding, or preventing thrombosis by administering to a mammal the novel spirocyclic compounds of the invention.

Another aspect of this invention is a method of treating a human to alleviate the pathological effects of atherosclerosis and arteriosclerosis, acute myocardial infarction, chronic stable angina, unstable angina, transient ischemic attacks and strokes, peripheral vascular disease, arterial thrombosis, preeclampsia, embolism, restenosis following angioplasty, carotid endarterectomy, and anastomosis of vascular grafts; wherein the method comprises administering to said human a therapeutically-effective amount of a novel spirocyclic compound of this invention.

### Detailed Description of the Invention

#### Definitions:

The term "spirocyclic" refers to a compound consisting of two rings having only one carbon atom in common. Spiropentane is an exemplary compound having a spirocyclic system. Spirocyclic systems exclude other bicyclic compounds such as naphthalene which have two or more carbon atoms in common.

The term "alkyl" used herein refers to a monovalent straight or branched chain radical of from one to ten carbon atoms, including, but not limited to methyl, ethyl, n-propyl, isopropyl, n-butyl, isobutyl, tert-butyl, n-hexyl, and the like.

The term "halosubstituted alkyl" as used herein refers to an alkyl group as just defined, substituted by one, two or three halogen atoms selected from fluorine, chlorine, bromine, and iodine. Examples of such groups include chloromethyl, bromoethyl, trifluoromethyl, and the like.

5 The term "aryl" when used alone means a homocyclic aromatic radical whether or not fused. Aryl groups preferably comprise five to eighteen carbons and preferred aryl groups include phenyl, naphthyl, biphenyl, phenanthrenyl, naphthacenyl, and the like.

10 The term "substituted aryl" denotes an aryl group substituted with one, two, or three substituents chosen from halogen, hydroxy, protected hydroxy, cyano, nitro, C<sub>1</sub>-C<sub>10</sub> alkyl, C<sub>1</sub>-C<sub>10</sub> alkoxy, trifluoromethyl, amino, aminomethyl, and the like. Examples of such groups are 4-chlorophenyl, 2-methylphenyl, 3-methyl-4-hydroxyphenyl, and 3-ethoxyphenyl.

15 The term "arylalkyl" means one, two or three aryl groups having the number of carbon atoms designated, appended to an alkyl radical having the number of carbon atoms designated. A typical arylalkyl group is the benzyl group.

The term "alkenyl" as used herein refers to a monovalent straight or branched chain radical of from two to six carbon atoms containing a carbon double bond including, but not limited to, 1-propenyl, 2-propenyl, 2-methyl-1-propenyl, 1-butenyl, 2-butenyl and the like.

20 The term "alkylene" as used herein refers to a divalent straight or branched chain group of from one to ten carbon atoms, including but not limited to, -CH<sub>2</sub>-, -(CH<sub>2</sub>)<sub>2</sub>-, -(CH<sub>2</sub>)<sub>3</sub>-, -CH(CH<sub>3</sub>)-, -CH(C<sub>2</sub>H<sub>5</sub>)-, -CH(CH<sub>3</sub>)CH<sub>2</sub>-, and the like.

25 The term "alkenylene" as used herein refers to a divalent straight or branched chain group of from two to ten carbon atoms containing a carbon-carbon double bond, including but not limited to, -CH=CH-, -C(CH<sub>3</sub>)=CH-, CH=CH-CH<sub>2</sub>-, -CH=C(CH<sub>3</sub>)-CH<sub>2</sub>-, -CH<sub>2</sub>CH(CH=CH<sub>2</sub>)CH<sub>2</sub>, and the like.

The term "alkynylene" as used herein refers to a divalent straight or branched chain group of from two to ten carbon atoms containing a carbon-carbon triple bond, including but not limited to,

30

and the like.

The term "alkoxy" used herein refers to a monovalent straight or branched chain radical of from one to six carbon atoms linked through an oxygen atom, including, but not limited to methoxy, ethoxy, n-propoxy, isopropoxy, n-butoxy, isobutoxy, tert-butoxy, and the like.

5        The term "cycloalkyl" used herein refers to a non-aromatic ring structure of from three to eight carbon atoms, including, but not limited to cyclobutyl, cyclopentyl, cyclohexyl, and the like.

10       The term "alkynyl" refers to a monovalent straight or branched chain group of from two to six carbon atoms containing a carbon-carbon triple bond, including but not limited to,  $-C\equiv CH$ ,  $-CH_2-CH_2-C\equiv CH$ ,  $-CH_2-C\equiv C-CH_2-CH_3$ , and the like.

The term "aralkoxy" refers to a monovalent radical in which an aryl or substituted aryl group, as defined above, is linked through an oxygen atom, including, but not limited to phenoxy, naphthoxy,  $-O-(C_6H_4)-CH_3$ , and the like.

15       The term "substituted amino" as used herein refers to an amino group in which one or more hydrogens are substituted with alkyl, halosubstituted alkyl, aryl, substituted aryl, alkenyl, or alkynyl groups, as these groups are defined above.

The term "carbamoyl" refers to an aminocarbonyl group, also called carbamyl, in which the amino portion is either substituted amino or unsubstituted amino.

The term "acyl" refers to a group having the structure:

where R is alkyl, halosubstituted alkyl, aryl, substituted aryl, alkenyl, or alkynyl, as defined above.

The term "acid radical" refers to an organic radical which is a proton donor. Illustrative acid radicals include;

5           The term "acidic group" is an organic group containing one or more acid radicals. An acidic group may comprise only an acid radical.

          The term "non-interfering substituent" refers to an organic radical which does not significantly reduce the therapeutic effectiveness of a compound.

Compounds of the Invention:

10           This invention provides compounds of the general formula (I), or a pharmaceutically-acceptable salt, solvate or or prodrug thereof:

wherein;

the spirocycle nucleus A/B is a member selected from the group consisting of;

wherein

p is the number from 1 to 2,

- 5 one of the "a" and "b" attachment points of the spirocyclic nucleus is attached to a carbon of the pyridyl group while the other is attached to the  $R_3$  group, and

$R_2$  is a  $R_{10}$  group when the "a" attachment point is attached to the pyridyl group, otherwise  $R_2$  is a  $R_0$  group when the "b" attachment point of the spirocyclic nucleus is attached to the pyridyl group;

$R_{10}$  is the same or different and is a non-interfering substituent independently selected from hydrogen, alkyl, halosubstituted alkyl, alkenyl, alkynyl, cycloalkyl, aryl, arylalkyl, hydroxy, alkoxy, arylalkoxy, amino, substituted amino, carbamoyl, carboxy, acyl, cyano, halo, nitro, sulfo, =O, or =S, with the proviso that only one  $R_{10}$  may be =O or =S;

m is a number from zero to 9;

$R_0$  is the same or different and is a non-interfering substituent independently selected from hydrogen, alkyl, halosubstituted alkyl, alkenyl, alkynyl, cycloalkyl, aryl, arylalkyl, hydroxy, alkoxy, arylalkoxy, amino, substituted amino, carbamoyl, carboxy, acyl, cyano, halo, nitro, sulfo, =O, or =S, with the proviso that only one  $R_0$  may be =O or =S;

n is a number from zero to 9;

X is a substituent selected from the group consisting of hydrogen, halo,  $-C_{1-6}$ alkyl,  $C_{1-6}$ alkoxy,  $C_{2-6}$ alkenyl,  $C_{2-6}$ alkynyl,  $C_{3-8}$ cycloalkyl,  $C_{0-4}$ alkyl $C_{3-8}$ cycloalkyl, -CN,  $-NO_2$ ,  $-(CH_2)_j-N(-R^a, -R^b)$ ,  $-C(=O)-N(-R^a, -R^b)$ ,  $-S(=O)_2-N(-R^a, -R^b)$ ,  $-S(=O)_2-R^2$ ,  $-CF_3$ , and  $-(CH_2)_j-O-R^a$ ; wherein

$R^a$  and  $R^b$  are independently selected from the group consisting of H,  $-C_{1-6}$ alkyl,  $C_{1-6}$ alkoxy,  $C_{2-6}$ alkenyl,  $C_{2-6}$ alkynyl,  $C_{3-8}$ cycloalkyl,  $C_{0-6}$ alkyl $C_{3-8}$ cycloalkyl, and  $-C_{0-6}$ alkyl-(carbocyclic aryl), wherein from 0-4 hydrogen atoms on the ring atoms of the carbocyclic aryl moiety may be independently replaced with a member selected from the group consisting of halo,  $C_{1-4}$ alkyl,  $C_{2-6}$ alkenyl,  $C_{2-6}$ alkynyl,  $C_{3-8}$ cycloalkyl,  $C_{0-4}$ alkyl $C_{3-8}$ cycloalkyl, -CN,  $-CF_3$  and  $-NO_2$ ; and

j is an integer of 0-2; and

$R_3$  is an acidic group containing one or more acid radicals.

A preferred group of the above compounds have the following spirocyclic nuclei:

wherein

p is the number from 1 to 2,

one of the "a" and "b" attachment points of the spirocyclic nucleus is attached to the pyridyl group while the other is attached to the  $R_3$  group, and

$R_2$  represents either a  $R_{10}$  or a  $R_0$  group depending on whether the "a" attachment point or the "b" attachment point of the spirocyclic nucleus is attached to the pyridyl group.

A second preferred group of the above compounds have the following spirocyclic nuclei:

- 5        p is the number from 1 to 2,  
          one of the "a" and "b" attachment points of the spirocyclic nucleus is attached to  
          the pyridyl group while the other is attached to the R<sub>3</sub> group, and  
          R<sub>2</sub> represents either a R<sub>10</sub> or a R<sub>0</sub> group depending on whether the "a" attachment  
          point or the "b" attachment point of the spirocyclic nucleus is attached to the pyridyl  
 10        group.

Further such preferred compounds have the following spirocyclic nuclei:

- 5 wherein the substituents and attachments are as discussed above. In one most preferred embodiment, the "a" attachment point is attached to the pyridyl group. In a second most preferred embodiment, the "b" attachment point is attached to the pyridyl group.

#### The Pyridyl Substituents:

In a preferred embodiment a bond which directly links a carbon of the pyridyl substituent to a nitrogen atom of the spirocyclic nucleus.

- 10 A preferred pyridyl substituent of formula (I) is a group of the following formula:

wherein X is a member selected from the group consisting of hydrogen, lower alkyl, halogen and trihalomethyl.

- 15 In an especially preferred embodiment, the pyridyl substituent of formula (I) is of the formula below and is linked directly to a nitrogen atom on the spirocyclic nucleus:

wherein X is a member selected from the group consisting of hydrogen, lower alkyl, halogen and trihalomethyl. Even more preferred is such a pyridyl radical wherein X is a hydrogen atom. For example in compounds having a 4-(4-pyridyl)diazaspiro-1-yl, moiety the ring nitrogen in the diazaspino nucleus is believed to contribute to the ability of the nitrogen atom in the pyridyl group to function as a base as shown below:

Thus, such compounds of the invention are preferred wherein the spirocyclic nucleus is a member selected from the group consisting of 6,6-diaza, 6,6-aza, 6,5-diaza and 5,6-diaza, and the like.

### The Acidic Substituent R<sub>3</sub>

The substituent R<sub>3</sub> of formula (I) is an acidic group. An acidic group contains one or more acidic radicals. Suitable acidic radicals contain one or more proton donors, and include groups such as sulfonic acids, tetrazoles, phosphonic acids, carboxylic acids, and the like. The acidic radical may be bound to an aryl group, such as phenyl or substituted phenyl, or bound to alkyl chains, such as methylene. These groups may also be bound to the spirocyclic nucleus through alkyl chains having heteroatoms, such as S, O, or N, and amide (CONH) or carbonyl (CO) groups. The acidic substituent may also comprise an  $\alpha$ -sulfonamido carboxylic acid group of the formula:

In preferred embodiments, R<sub>3</sub> is CO<sub>2</sub>R<sub>5</sub>, (C<sub>1</sub>-C<sub>6</sub> alkyl)CO<sub>2</sub>R<sub>5</sub>, CO(C<sub>1</sub>-C<sub>6</sub> alkyl)CO<sub>2</sub>R<sub>5</sub>, or CONH(C<sub>1</sub>-C<sub>6</sub> alkyl)CO<sub>2</sub>R<sub>5</sub>, (C<sub>1</sub>-C<sub>6</sub> alkyl)CH(NHR<sub>4</sub>)CO<sub>2</sub>R<sub>5</sub>, CO(C<sub>1</sub>-C<sub>6</sub> alkyl)CH(NHR<sub>4</sub>)CO<sub>2</sub>R<sub>5</sub>, or CONH(C<sub>1</sub>-C<sub>6</sub> alkyl)CH(NHR<sub>4</sub>)CO<sub>2</sub>R<sub>5</sub>, wherein R<sub>4</sub> is SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), SO<sub>2</sub> aryl, or SO<sub>2</sub> substituted aryl, and R<sub>5</sub> is hydrogen, C<sub>1</sub>-C<sub>6</sub> alkyl, aryl, or substituted aryl.

Preferred Spirocyclic Compounds:

- 5 General formulae and compound species for a preferred embodiment according to the present invention include the following pyridyl substituted spirocyclic compound formulae:

Also contemplated for such structures are their corresponding pharmaceutically acceptable salts, solvates, prodrug derivatives, and pharmaceutical compositions comprising such compounds in combination with at least one pharmaceutically acceptable carriers or excipient.

The compounds of the invention possess at least one acidic functional substituent (viz.,  $R_3$  of Formula I) and, as such, are capable of forming salts. Representative pharmaceutically-acceptable salts include, but are not limited to, salts with alkali and alkaline earth metals such as lithium, sodium, potassium, calcium, magnesium, aluminum and the like. Salts are conveniently prepared from the free acid by treating the acid in solution with a base or by exposing the acid to an anion exchange resin on the salt cycle.

Included within the definition of pharmaceutically-acceptable salts are the relatively non-toxic, inorganic and organic base addition salts of compounds of the present invention, for example, ammonium, quaternary ammonium, and amine actions, derived from nitrogenous bases of sufficient basicity to form salts with the compounds of this invention (see, for example, S. M. Berge, et. al., "Pharmaceutical Salts," J. Phar. Sci., 66: 1-19 (1977)).

The basic portion of the compounds of the invention (viz., part Q of formula I or II) may be reacted with suitable organic or inorganic acids to form salts of the invention. Representative salts include those selected from the group comprising; acetate, benzenesulfonate, benzoate, bicarbonate, bisulfate, bitartrate, borate, camsylate, carbonate, chloride, clavulanate, dihydrochloride, edetate, edisylate, estolate, esylate, fumarate, gluceptate, gluconate, glutamate, glycolylarsanllate, hexylresorcinate, hydrabamine, hydrobromide, hydrochloride, hydroxynaphthoate, iodide, isothionate,

lactate, lactobionate, laurate, malate, malseate, mandelate, mesylate, methylbromide, methylnitrate, methylsulfate, mucate, napsylate, nitrate, oleate, oxalate, palmitate, pantothenate, phosphate, polygalacturonate, salicylate, stearate, subacetate, succinate, tannate, tartrate, tosylate, trifluoroacetate, trifluoromethane sulfonate, and valerate.

5           The compounds of the formula (I) or (II) can also be in the form of zwitterions, since they contain both acidic and basic functionality and are capable of self-protonation.

          Certain compounds of the invention possess one or more chiral centers and may thus exist in optically active forms, or as mixtures of diastereomers. Likewise, when the compounds contain an alkenyl or alkenylene group there exists the possibility of *cis*- and  
10    *trans*- isomeric forms of the compounds. The *R*- and *S*- isomers and mixtures thereof, including racemic mixtures as well as mixtures of *cis*- and *trans*- isomers, are contemplated by this invention. Additional asymmetric carbon atoms can be present in a substituent group such as an alkyl group. All such isomers as well as the mixtures thereof  
15    are intended to be included in the invention. If a particular stereoisomer is desired, it can be prepared by methods well known in the art by using stereospecific reactions with starting materials which contain the asymmetric centers and are already resolved or, alternatively by methods which lead to mixtures of the stereoisomers and subsequent resolution by known methods.

#### 20    Prodrug Derivatives of Compounds of the Invention:

          Prodrugs are derivatives of the compounds of the invention which have metabolically cleavable groups and become by solvolysis or under physiological conditions the compounds of the invention which are pharmaceutically active *in vivo*. For example, ester derivatives of compounds of this invention are often active *in vivo*,  
25    but not *in vitro*. Other derivatives of the compounds of this invention have activity in both their acid and acid derivative forms, but the acid derivative form often offers advantages of solubility, tissue compatibility, or delayed release in the mammalian organism (see, Bundgard, H., Design of Prodrugs, pp. 7-9, 21-24, Elsevier, Amsterdam 1985). Prodrugs include acid derivatives well known to practitioners of the art, such as,  
30    for example, esters prepared by reaction of the parent acid with a suitable alcohol, or amides prepared by reaction of the parent acid compound with an amine. Simple aliphatic or aromatic esters derived from acidic groups pendant on the compounds of this invention are preferred prodrugs. In some cases it is desirable to prepare double ester type prodrugs such as (acyloxy)alkyl esters or ((alkoxycarbonyl)oxy)alkyl esters.

Preferred are the C<sub>1</sub>-C<sub>8</sub> alkyl, C<sub>2</sub>-C<sub>8</sub> alkenyl, aryl, C<sub>7</sub>-C<sub>12</sub> substituted aryl, and C<sub>7</sub>-C<sub>12</sub> arylalkyl esters of the compounds of the invention (per formula I or II). Particularly preferred are the C<sub>1</sub>-C<sub>4</sub> alkyl esters, for example, where the R<sub>3</sub> acidic group has been esterified to form a group represented by one of the following formulae:

5

#### Preparation of Spirocyclic Compounds:

10 The synthesis of spirocyclic compounds covered by the invention is described in Scheme 1 thru Scheme 25, in which the following terms are used:

P means a general protective group for amines like benzyl, tert.-butoxycarbonyl, benzyloxycarbonyl, or ethoxycarbonyl.

15 X, when present, is a spacer typically consisting of a chain of up to three carbon atoms, e.g. methylene, dimethylene, or trimethylene.

Scheme Nomenclature:

The substituent R is a non-interfering substituent illustrated by an alkyl group selected from ethyl, methyl, or tert.-butyl forming esters containing the group COOR, which are cleaved to the corresponding carboxylic acids (R = H).

5

Scheme 1

Scheme 1 describes the synthesis of 9-(4-pyridyl)-3,9-diazaspiro[5.5]undecane containing compounds derived from *tert*-butyl 3,9-diazaspiro[5.5]undecane-3-carboxylate which is prepared according to a published procedure (US Patent #5,451,578). The coupling of the diazaspirocyclic template to 4-bromopyridine is accomplished utilizing a Pd-catalyzed reaction that is well known in the literature (Buckwald, S.L., *et al.* J. Org. Chem. 1996, 61, 7240). Subsequent coupling of this key intermediate as described in

10 Paths a-c affords a variety of different targets. Path "a" demonstrates targets derived from removal of the Boc-group followed by acylation with an appropriate ester-acid chloride such as ethyl glutaryl chloride. Subsequent mild acid or base hydrolysis of the ester affords the desired targets. Path "b" demonstrates targets containing a sulfonylated or carbamoylated amino group  $\alpha$  to the terminal acid functionality. Coupling of an

15 appropriate acid- $\alpha$ -amino-ester side chain to the spirocyclic template is accomplished using standard peptide coupling agents such as HBTU or BOP-Cl. Mild acid or base hydrolysis affords the desired targets. Path "c" demonstrates targets containing a urea-linkage between the spirocycle and an appropriately substituted 2,3-diaminopropionic acid derivative. The coupling is accomplished by removing the Boc-group from the

20

- spirocycle intermediate and reacting that with a p-nitro-phenylcarbamate of a 2,3-diaminopropionic acid ester. Mild acid or base hydrolysis affords the desired targets. Path "d" demonstrates targets derived from the coupling of a p-nitro-phenylcarbamate derivative of an O-substituted 4-hydroxypiperidine with the deprotected spirocyclic intermediate, thus affording a urea linkage. Mild acid or base hydrolysis provides the desired targets. Path "e" demonstrates targets derived from a peptide-like coupling (utilizing HBTU, BOP-Cl, or similar reagent) between the deprotected spirocyclic intermediate and an isonipecotic acid derivative in which the nitrogen has been acylated with an appropriate ester-acid chloride similar to Path "a". Mild acid or base hydrolysis affords the desired targets.

Scheme 2

- Scheme 2 describes the synthesis of (3-aza-spiro[5.5]undec-9-yl)formic acid derivatives. The synthesis of the spirocyclic nucleus is achieved following the patent procedure (see US Patent No. 5,451,578). The ester formation and deprotection of Boc is achieved in one step by treating with EtOH/HCl(g). The coupling of the azaspirocycle to 4-bromopyridine is accomplished utilizing a Pd-catalyzed reaction that is well known in the literature (Stephen L. Buckwald and Seble Wagaw, J. Org. Chem, 1996, 61, 7240). Subsequent coupling of this key intermediate as described in Paths a-c affords a variety of different targets. Coupling of the resultant spirocyclic acid template with appropriately substituted  $\alpha$  or  $\beta$ -amino ester and unsubstituted aminoesters is accomplished using

standard peptide coupling reagents such as EDC, HOBt. The mild acid or base hydrolysis of the ester affords the desired targets.

Scheme 3

5

Scheme 3 describes the synthesis of the (3-aza-spiro[5.5]undec-9-yl)acetic acid derivative, a key spirocyclic intermediate that will be utilized in the synthesis of various targets as described herein. The spirocyclic enone is synthesized following the procedure as described in the Step A of Example 1 (WO 97/11940). The enone is reduced to ketone with L-selectride, followed by deprotection of carbobenzoyloxy under standard hydrogenolysis conditions. The pyridyl group is then coupled to the spirocyclic template using a Pd-catalyzed coupling to 4-bromopyridine, thus affording the key spirocyclic intermediate. This ketone intermediate is subsequently treated under reductive amination conditions with several aminoesters and  $\alpha$ -substituted aminoesters. In other series of derivatives, the intermediate ketone is reduced to the corresponding alcohol with sodium borohydride and then alkylated with bromoalkylesters. The mild acid or base hydrolysis of the esters affords the desired targets.

20

Scheme 4

Scheme 4 describes the synthesis of *tert*-butyl 2,8-diaza-8-(4-pyridyl)spiro[4.5]decane-2-carboxylate, a key spirocyclic intermediate that will be utilized in the synthesis of various targets as described herein. The known diacid is treated with DCC followed by opening of the cyclic anhydride with 4-methoxybenzyl amine. This intermediate is then cyclized to the imide using sodium acetate in acetic anhydride. The carbonyl groups of the imide are then reduced using  $\text{BH}_3$ -THF complex. Removal of the 4-methoxy benzyl group is accomplished utilizing ceric ammonium nitrate. The Boc group is then added followed by removal of the benzyl group using standard hydrogenolysis over Pearlman's catalyst. The pyridyl group is then coupled to the spirocyclic template using a Pd-catalyzed coupling to 4-Br-pyridine (Buckwald, S.L., *et al.* J. Org. Chem. 1996, 61, 7240), thus affording the key spirocyclic intermediate.

Scheme 5

Scheme 5 describes the synthesis of 2,8-diaza-8-(4-pyridyl)spiro[4.5]decane containing compounds derived from *tert*-butyl 2,8-diaza-8-(4-pyridyl)spiro[4.5]decane-2-

carboxylate which was obtained as described in Scheme 4. Removal of the Boc group with TFA provides the key intermediate from which all of the targets in this series were derived. Path "a" demonstrates targets obtained by the acylation of the key intermediate with a variety of ester-acid chlorides such as ethyl glutaryl chloride. Mild acid or base hydrolysis of the ester then affords the desired targets. Path "b" demonstrates targets containing a sulfonylated or carbamoylated amino group  $\alpha$  to the terminal acid functionality. The coupling of an appropriate acid- $\alpha$ -amino-ester side chain is accomplished using standard peptide coupling agents such as HBTU or BOP-Cl. Mild acid or base hydrolysis of the ester then affords the desired targets. Path "c" demonstrates targets derived from a peptide-like coupling (utilizing HBTU, BOP-Cl, or similar reagent) between the key spirocyclic intermediate and an isonipecotic acid derivative in which the nitrogen has been acylated with an appropriate ester-acid chloride similar to Path "a". Mild acid or base hydrolysis of the ester then affords the desired targets. Path "d" demonstrates targets containing a urea linkage between the spirocycle and an appropriately derivatized piperazinone. Reacting the spirocycle with a p-nitro-phenylcarbamate of a functionalized piperazinone generates this urea linkage. Mild acid or base hydrolysis of the ester then affords the desired targets. Path "e" demonstrates targets derived from the coupling of a p-nitro-phenylcarbamate derivative of an O-substituted 4-hydroxypiperidine with the key spirocyclic intermediate, thus affording the urea linkage. Mild acid or base hydrolysis of the ester then provides the desired targets.

Scheme 6

Scheme 6 describes the synthesis of a key spirocyclic intermediate 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane. The spirocyclic anhydride (see WO 97/11940) is reacted with 4-amino pyridine to yield the imide. This is then reduced with BH<sub>3</sub>-THF complex to

furnish the amine. De-benzylation under hydrogenolysis conditions provided the desired spirocyclic template.

### Scheme 7

5

Scheme 7 describes the synthesis of 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane containing compounds derived from the key intermediate which is obtained as described in Scheme 6. Path "a" demonstrates targets containing a sulfonylated or carbamoylated amino group  $\alpha$  to the terminal acid functionality. The coupling of the appropriate acid- $\alpha$ -amino-ester side chain is accomplished using standard coupling agents such as HATU or HBTU. Mild acid or base hydrolysis of the ester then affords the desired targets. Path "b" demonstrates targets containing a urea linkage between the spirocycle and an appropriately derivatized piperazine. Reacting the spirocycle with a p-nitrophenyl-carbamate of a functionalized piperazine generates this urea linkage. The acid hydrolysis of the ester then affords the desired targets. Path "c" demonstrates the target containing a urea linkage between spirocycle and an appropriately derivatized piperazinone. The targets are synthesized as described for Path "b". Path "d" describes the targets containing a direct linkage between spirocycle and an appropriately derivatized piperidine. Reacting the spirocycle with a functionalized 4-piperidone under reductive amination conditions generates this linkage. Mild acid or base hydrolysis of the ester then affords the desired targets.

25

**Scheme 8**

5        Scheme 8 describes the synthesis of a series of targets having alkyl-urea appendages attached to 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane template. The spirocyclic piperidine is condensed with either isocyanates or with 4-nitrophenyl carbamates of the functionalized amines to afford the intermediate urea-esters. These esters are then hydrolyzed to the desired targets under mild acidic conditions.

10

**Scheme 9**

15        Scheme 9 describes the synthesis of 2-(4-((2-((4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)carbonyl)piperazino)acetic acid. Piperazine ethyl acetate derivative is reacted with 4-nitrophenyl chloroformate to give rise to the 4-nitrophenyl carbamate ester. This was reacted with the spirocyclic piperidine to afford the urea-ester. Treatment of this ester with 2N HCl provided the desired target.

Scheme 10

- 5            Scheme 10 describes the synthesis of 3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperazino)propanoic acid. Benzyl-1-piperazine carboxylate is alkylated with ethyl bromopropionate, and the product is hydrogenolyzed. This amine is then reacted with 4-nitrophenyl chloroformate to give rise to the 4-nitrophenyl carbamate derivative. The resultant carbamate is reacted with the spirocyclic piperidine to afford the
- 10    intermediate urea-ester. Treatment of the ester with 2N HCl provided the desired target.

**Scheme 11**

- Scheme 11 describes the synthesis of 3-oxo-3-(4-{[2-(4-pyridyl)-2,8-diazaspiro  
 5 [4.5]dec-8-yl]carbonyl}1,4-diazepan-1-yl)propanoic acid. N-Cbz-homopiperazine is  
 alkylated with bromoethyl propionate. The Cbz-group was removed under standard  
 hydrogenolysis conditions. This amine is then reacted with 4-nitrophenyl chloroformate  
 to afford the 4-nitrophenyl carbamate, which is subsequently coupled with the spirocyclic  
 piperidine to give rise to the desired compound as its ethyl ester. Hydrolysis of the ester  
 10 with 2N HCl yielded the target compound.

Scheme 12

Scheme 12 describes the synthesis of 3-oxo-3-(4-{{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1,4-diazepan-1-yl}propanoic acid. Homopiperazine is converted to the mono Cbz-derivative by reaction with Cbz-Cl and then isolation by chromatography. N-Cbz-homo piperazine is acylated with ethyl malonyl chloride, followed by removal of the Cbz-group under standard hydrogenolysis conditions. This material is then reacted with 4-nitrophenyl chloroformate to afford the 4-nitrophenyl carbamate, which is further reacted with the spirocyclic piperidine to give rise to intermediate urea-ester. Hydrolysis of the ester with 2N HCl yielded the target compound.

Scheme 13

Scheme 13 describes the synthesis of 2-[(1-{2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl}carbonyl)-4-piperidyl]oxy]acetic acid via the coupling of a p-nitrophenyl carbamate derivative of an O-substituted 4-hydroxypiperidine with 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane. N-Boc-4-hydroxy piperidine is reacted with ethyl diazoacetate and rhodium diacetate dimer to give rise to the oxy-ethyl acetate. This intermediate is treated with TFA, and the resultant piperidine is reacted with 4-nitrophenyl chloroformate. The 4-nitro phenyl carbamate is then reacted with the spirocyclic piperidine to afford the coupled urea-ester. Hydrolysis of the ester with 2N HCl yielded the desired target.

Scheme 14

- 5 Scheme 14 describes the synthesis of 2-[(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-4-piperidyl)-methoxy]acetic acid. 4-Pyridylcarbinol is hydrogenated over  $\text{PtO}_2$  in acetic acid. The resulting piperidine is then converted to its N-Cbz-derivative using Cbz-Cl. This compound is then reacted with ethyl diazoacetate and rhodium diacetate dimer to give rise to the oxy-ethyl acetate intermediate. This is
- 10 then hydrogenolyzed and reacted with 4-nitrophenyl chloroformate to afford its 4-nitrophenyl carbamate. This carbamate is then reacted with the spirocyclic piperidine to yield the urea-ester. Hydrolysis of the ester with 2N HCl afforded the desired compound.

Scheme 15

- Scheme 15 describes the synthesis of 2-[methyl(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-4-piperidyl)amino]acetic acid. N-Benzyl 4-piperidone is reductively alkylated with N-methyl glycine using sodium triacetoxymethylborohydride and acetic acid. This intermediate is then converted to its ethyl ester, N-debenzylated, followed by reaction with p-nitrophenyl chloroformate. The resultant p-nitrophenyl carbamate is then reacted with the spirocyclic piperidine to furnish the urea-ester intermediate. Hydrolysis of the ester with 2N HCl provided the desired target.

Scheme 16

- 5 Scheme 16 describes the synthesis of 2-(1-([2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl)-4-piperidyl)acetic acid. Ethyl-4-piperidine acetate is reacted with 4-nitrophenyl chloroformate to give rise to the 4-nitrophenyl carbamate analog. This is then reacted with the spirocyclic piperidine to afford the coupled urea-ester. Treatment of the resulting ester with 2N HCl provided the desired target.

## Scheme 17

Scheme 17 describes the synthesis of 3-oxo-3-[(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-tetrahydro-1H-3-pyrrolyl)amino]propanoic acid. N-benzyl 3-amino-pyrrolidine is acylated with ethyl malonyl chloride, and the product is debenzylated. The free amine is then reacted with 4-nitrophenyl chloroformate to afford the 4-nitrophenyl carbamate. This carbamate is coupled with the spirocyclic piperidine to afford the urea-ester. Hydrolysis of the ester with 2N HCl afforded the desired compound.

**Scheme 18**

- 5 Scheme 18 describes the synthesis of 3-4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-piperidino)butanoic acid. The 4-Carbobenzyloxy piperidine is reductively alkylated with ethyl acetoacetate using sodium tri-acetoxyborohydride in acetic acid. The intermediate was then debenzylated using standard hydrogenolysis conditions followed by coupling with the spirocyclic piperidine to afford the amide. Hydrolysis of the ester with 2N HCl provided the desired target.

Scheme 19

5 Scheme 19 describes the synthesis of 3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-  
 8-yl]carbonyl}piperidino)propanoic acid from 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane  
 and N-alkyl isonipecotic acid derivatives. N-Boc-piperidine 4-carboxylic acid is  
 converted to its benzyl ester using DCC and benzyl alcohol. The removal of the Boc-  
 group with TFA provides the piperidine. After alkylation with bromoethyl propionate, the  
 10 benzyl group is hydrogenolyzed. This intermediate is then coupled with the spirocyclic  
 piperidine to afford the amide. Hydrolysis of the ester with 2N HCl provided the desired  
 target.

Scheme 20

5 Scheme 20 describes the synthesis of 3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperidino)propanoic acid. 4-Carbobenzyloxy piperidine is acylated with ethyl glutaryl chloride and then the benzyl group was hydrogenolyzed. This intermediate is then coupled with the spirocyclic piperidine under standard peptide coupling conditions to afford the amide. Treatment with 2N HCl hydrolyzed the ester and provided the desired target.

10

Scheme 21

- Scheme 21 describes the synthesis of ethyl 2-[(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-piperidino)sulfonyl]acetic acid. Ethyl 2-chlorosulfonylacetate (Oliver, J. E., and Demilo, A. B., *Synthesis*, 321 1975) is reacted with 4-Carbobenzyloxy piperidine and the resultant sulfonamide-containing compound is de-benzylated under standard hydrogenolysis conditions. This intermediate is then coupled with the spirocyclic piperidine to afford the key ester. Treatment of this ester with 2N HCl provided the desired target.

Scheme 22

- Scheme 22 describes the synthesis of 2-[(1-{2-oxo-2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]ethyl}-4-piperidyl)oxy]acetic acid. N-Cbz-4-hydroxypiperidine is reacted with ethyl diazoacetate and rhodium diacetate dimer to give rise to the oxy-ethyl acetate intermediate. It is then hydrogenolyzed and alkylated with *tert*-butyl bromoacetate. Treatment with TFA provided the acetic acid derivative which was then coupled with the spirocyclic piperidine to yield the amide. Hydrolysis of the ester with 2N HCl provided the desired target.

Scheme 23

5 Scheme 23 describes the synthesis of 2-(4-([2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl)phenoxy)acetic acid. Benzyl 4-hydroxy benzoate is reacted with ethyl diazoacetate and rhodium diacetate dimer to give rise to the intermediate oxy-ethyl acetate. This compound is then de-benzylated and coupled with the spirocyclic piperidine to afford the benzamide. Hydrolysis of the ester with 2N HCl provided the desired target.

10

Scheme 24

Scheme 24 describes the synthesis of 2-(5-{[2(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1H-1-indolyl)acetic acid. Indole-4-carboxylic acid was treated with excess sodium hydride and *tert*-butyl bromoacetate to afford 1-(2-*tert*-butoxy-2-oxoethyl)-1H-5-indole carboxylic acid. This was then coupled with the spirocyclic piperidine to afford the amide. Hydrolysis of the ester with 2N HCl yielded the desired product.

#### Scheme 25

10

Scheme 25 describes the facile synthesis of 2-[2-({2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]acetyl}amino)-1,3-thiazol-4-yl]acetic acid from the alkylation of 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane with ethyl 2-(2-chloroacetamido)-4-thiazoleacetate to afford the desired compound as its ethyl ester. Hydrolysis of the ester with 2N HCl yielded the target compound.

15

The following Examples illustrate the practice of the invention.

#### Example 1

20 Preparation of 5-oxo-5-(9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl)pentanoic acid.

Step A: Preparation of *tert*-butyl 9-(4-pyridyl)-3,9-diazaspiro[5.5]undecane-3-carboxylate.

The synthesis of the starting material, *tert*-butyl 3,9-diazaspiro[5.5]undecane-3-carboxylate was accomplished as described in US patent #5,451,578. This solid (1.0 gm) is combined with 4-bromopyridine-HCl (766 mg), tris(dibenzylideneacetone) dipalladium(0)-chloroform adduct (124 mg), S-BINAP (174 mg), and sodium *tert*-butoxide (1.51 gm) under argon in a dry round bottom flask. To this mixture of solids is added 20 ml of anhydrous toluene. The mixture is then warmed to 90-95°C and stirred until done based on analytical RP-HPLC analysis. The solution is cooled to 0°C, 70 ml of EtOAc is added, and the solution is stirred for 15 minutes. After filtering through celite, the solvent is evaporated under reduced pressure. The semi-solid residue is then purified using RP-HPLC to afford pure title compound (1.08 gm, 83%).

MS (ES) 332 (M+H)<sup>+</sup>

Step B: Preparation of methyl 5-oxo-5-(9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl)pentanoate.

To the material obtained in step A (110 mg) was added 40% TFA in CH<sub>2</sub>Cl<sub>2</sub> (2 ml) at room temperature. After stirring for ½ hr, the solvent was evaporated. The resultant residue was dissolved in anhydrous CH<sub>2</sub>Cl<sub>2</sub> (3 ml) under argon at room temperature. After adding DIEA (0.54 ml) slowly, methyl glutaryl chloride (0.1 ml) was added dropwise via syringe and stirring was maintained overnight. After evaporation of the solvent under reduced pressure, EtOAc (5 ml) was added. This solution was then washed with H<sub>2</sub>O (5 ml), 1 M HCl (5 ml), and then the combined aqueous washes were extracted with EtOAc (2 x 5 ml). The aqueous washes were then lyophilized and purified via RP-HPLC to afford the desired ester (18 mg).

MS (APCI) 360 (M+H)<sup>+</sup>

Step C: Preparation of the title compound.

To the material obtained in step B (11 mg) in MeOH (2 ml) was added 1M LiOH (0.12 ml) and H<sub>2</sub>O (0.2 ml). After stirring for 2 days at room temperature, the MeOH was

removed under reduced pressure and the resultant material was purified via RP-HPLC to afford the title compound (8.9 mg, 83%).

PRP: IC<sub>50</sub>=5.1 μM

5

### Example 2

Preparation of 6-oxo-6-(9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl)hexanoic acid.

- 10 This compound was prepared by substantially following the procedure in Example 1 except that methyl adipyl chloride was used in place of methyl glutaryl chloride in step B.

MS (APCI) 360 (M+H)<sup>+</sup>

ELISA: IC<sub>50</sub>=0.258 μM

PRP: IC<sub>50</sub>=4.5 μM

15

### Example 3

Preparation of 7-oxo-7-(9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl)heptanoic acid.

- 20 This compound was prepared by substantially following the procedure in Example 1 except that ethyl 6-(chloroformyl)hexanoate was used in place of methyl glutaryl chloride in step B.

MS (APCI) 374 (M+H)<sup>+</sup>

ELISA: IC<sub>50</sub>=0.265 μM

PRP: IC<sub>50</sub>=4.5 μM

### Example 4

- 25 Preparation of 8-oxo-8-(9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl)octanoic acid.

This compound was prepared by substantially following the procedure in Example 1 except that methyl 8-chloro-8-oxo-octanoate was used in place of methyl glutaryl chloride in step B.

MS (APCI) 388 (M+H)<sup>+</sup>

5 ELISA: IC<sub>50</sub>=1.16 μM

PRP: IC<sub>50</sub>=18 μM

### Example 5

Preparation of 2(S)-2-{[(benzyloxy)carbonyl]amino}-5-oxo-5-[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]pentanoic acid.

Step A: Preparation of ethyl 2(S)-2-{[(benzyloxy)carbonyl]amino}-5-oxo-5-[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]pentanoate.

15 To *tert*-butyl 9-(4-pyridyl)-3,9-diazaspiro[5.5]undecane-3-carboxylate (300 mg) under argon at room temperature was added 40% TFA in CH<sub>2</sub>Cl<sub>2</sub> (5 ml). After stirring for 1 hr, the solvent was evaporated. The resultant residue was dissolved in anhydrous DMF (7.5 ml) under argon at room temperature. After adding HBTU (750 mg), (4S)-4-  
20 {[(benzyloxy)carbonyl]amino}-5-ethoxy-5-oxopentanoic acid (306 mg) (obtained from Example 40), and then DIEA (1.4 ml) slowly, the solution was stirred at room temperature overnight. The mixture was poured into 50 ml of brine and then 5 ml of H<sub>2</sub>O was added. This solution was washed with EtOAc (2 x 30 ml). The EtOAc was washed with saturated NaHCO<sub>3</sub> (30 ml), dried with MgSO<sub>4</sub>, and then evaporated under vacuum to give the crude product. This was then purified on RP-HPLC to afford the desired ester.

25 MS (ES) 523 (M+H)<sup>+</sup>

Step B: Preparation of the title compound.

5 The ester (4.6 mg) from Step A in this example was treated with 1 ml of 2M HCl at room temperature and stirred overnight. The reaction was followed by analytical RP-HPLC until the starting material had been consumed. The resultant solution was then submitted to purification via RP-HPLC thus affording the title acid (2.3 mg, 53%).

MS (ES) 495 (M+H)<sup>+</sup>

ELISA: IC<sub>50</sub>=0.007 μM

PRP: IC<sub>50</sub>=4.6 μM

10

#### Example 6

Preparation of 2(S)-2-[(butylsulfonyl)amino]-5-oxo-5-[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]pentanoic acid.

15 The title compound was prepared by substantially the same procedure as for Example 5 except that (4S)-4-[(butylsulfonyl)amino]-5-ethoxy-5-oxopentanoic acid was used in place of (4S)-4-[[[(benzyloxy)carbonyl]amino}-5-ethoxy-5-oxopentanoic acid.

MS (ES) 481 (M+H)<sup>+</sup>

ELISA: IC<sub>50</sub>=0.023 μM

PRP: IC<sub>50</sub>=0.79 μM

20

#### Example 7

Preparation of 2(S)-2-[[[(4-methylphenyl)sulfonyl]amino}-5-oxo-5-[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]pentanoic acid.

The title compound was prepared by substantially the same procedure as for Example 5 except that (4S)-4-[[[(4-methylphenyl)sulfonyl]amino]-5-ethoxy-5-oxopentanoic acid was used in place of (4S)-4-[[[(benzyloxy)carbonyl]amino]-5-ethoxy-5-oxopentanoic acid.

MS (ES) 515 (M+H)<sup>+</sup>

5 ELISA: IC<sub>50</sub>=0.002 μM

PRP: IC<sub>50</sub>=0.077 μM

### Example 8

Preparation of 2(S)-2-[[[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino]-5-oxo-5-[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]pentanoic acid.

10

The title compound was prepared by substantially the same procedure as for Example 5 except that (4S)-4-[[[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino]-5-ethoxy-5-oxopentanoic acid was used in place of (4S)-4-[[[(benzyloxy)carbonyl]amino]-5-ethoxy-5-oxopentanoic acid.

15 MS (ES) 520 (M+H)<sup>+</sup>

ELISA: IC<sub>50</sub>=0.002 μM

PRP: IC<sub>50</sub>=0.021 μM

### Example 9

20 Preparation of 2(S)-2-[[[butoxycarbonyl]amino]-5-oxo-5-[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]pentanoic acid.

The title compound was prepared by substantially the same procedure as for Example 5 except that (4S)-4-[[[butoxycarbonyl]amino]-5-ethoxy-5-oxopentanoic acid was used in place of (4S)-4-[[[(benzyloxy)carbonyl]amino]-5-ethoxy-5-oxopentanoic acid.

MS (ES) 461 (M+H)<sup>+</sup>ELISA: IC<sub>50</sub>=0.002 μMPRP: IC<sub>50</sub>=0.722 μM

5

Example 10

Preparation of (2S)-2-[[[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}-3-({[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]carbonyl}amino)propanoic acid.

Step A: Preparation of 3-(4-pyridyl)-3,9-diazaspiro[5.5]undecane.

10

To *tert*-butyl 9-(4-pyridyl)-3,9-diazaspiro[5.5]undecane-3-carboxylate (100 mg) (obtained in Example 1, step A) is added 40% TFA in CH<sub>2</sub>Cl<sub>2</sub> (3 ml) at room temperature under argon. After stirring for 1 hr, the solvent is evaporated under reduced pressure. The resultant syrup is used without further purification in Step C of this Example.

15

Step B: Preparation of ethyl (4S)-3-[[[(3,5-dimethyl-4-isoxazolyl)sulfonyl]-2-oxotetrahydro-1*H*-4-imidazolecarboxylate.

20 To ethyl (2S)-3-amino-2-[[[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino]propanoate (291 mg) (as prepared in US Patent No. 5648368) in CH<sub>2</sub>Cl<sub>2</sub> (5 ml) at 0°C under argon was added 4-nitrophenyl chloroformate (222 mg) followed by dropwise addition of DIEA (1.0 ml). The resultant yellow solution was stirred overnight as it warmed to room temperature. Additional CH<sub>2</sub>Cl<sub>2</sub> (10 ml) was then added followed by washes of 50%

saturated  $\text{NaHCO}_3$  (5 x 10 ml), 1M HCl (10 ml), and brine (10 ml). The colorless solution was then dried with  $\text{MgSO}_4$ , filtered, and evaporated *in vacuo* to afford the desired compound (311 mg, 98%).

MS (ES) 318 (M+H)<sup>+</sup>

5

Step C: Preparation of ethyl (2S)-2-[[[3,5-dimethyl-4-isoxazolyl)sulfonyl]amino]-3-({[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]carbonyl}amino)propanoate.

A mixture of the materials obtained in Step A and in Step B (95 mg) of this example in DMF (3 ml) under argon was warmed to 65°C and stirred overnight. The reaction mixture was then cooled to room temperature, diluted with 20 ml  $\text{H}_2\text{O}$ , and acidified to pH=2 with TFA. This solution was then purified utilizing RP-HPLC to afford the desired ester (126 mg, 76%)

MS (ES) 549 (M+H)<sup>+</sup>

15

Step D: Preparation of the title compound.

The ester from Step C in this example was hydrolyzed by substantially following the procedure from Example 5, Step B to afford the title compound as a white fluffy solid in quantitative yield.

MS (ES) 521 (M+H)<sup>+</sup>

ELISA:  $\text{IC}_{50}$ =0.001  $\mu\text{M}$

PRP:  $\text{IC}_{50}$ =0.031  $\mu\text{M}$

### Example 11

Preparation of 2-[(1-([9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]carbonyl)-4-piperidyl)oxy]acetic acid.

Step A: Preparation of *tert*-butyl 4-hydroxy-1-piperidinecarboxylate.

To a suspension of 4-piperidinol (5.06 gm) in anhydrous acetonitrile (50 ml) at room temperature under argon was added di-*tert*-butyl dicarbonate (11.4 gm) in 2 portions. Then DMAP (610 mg) was added and stirring maintained for 3.5 hrs.. After evaporation of the solvent under reduced pressure, the residue was partitioned between CH<sub>2</sub>Cl<sub>2</sub> (50 ml) and 1M HCl (50 ml). The HCl was then washed with more CH<sub>2</sub>Cl<sub>2</sub> (2 x 50 ml). The combined CH<sub>2</sub>Cl<sub>2</sub> washes were then extracted with brine (50 ml), dried with MgSO<sub>4</sub>, and then evaporated *in vacuo* to afford the desired product (9.95 gm, 99%) in sufficient purity to carry into the next step.

MS (IS) 202 (M+H)<sup>+</sup>

Step B: Preparation of *tert*-butyl 4-(2-ethoxy-2-oxoethoxy)-1-piperidinecarboxylate.

To the material from Step A of this example (5.0 gm) in anhydrous CH<sub>2</sub>Cl<sub>2</sub> (100 ml) at room temperature under argon was added rhodium(II) acetate dimer (300 mg) followed by very slow dropwise addition of a solution of ethyl diazoacetate (3.9 ml) in CH<sub>2</sub>Cl<sub>2</sub> (21 ml). After stirring for 0.5 hrs, the solution was evaporated to dryness and the residue purified utilizing flash chromatography (hexane/EtOAc, 4:1) to afford the desired compound (5.56 gm, 78%).

MS (DCI) 288 (M+H)<sup>+</sup>

Step C: Preparation of 4-nitrophenyl 4-(2-ethoxy-2-oxoethoxy)-1-piperidinecarboxylate.

To the material obtained in Step B of this example (1.5 gm) was added 40% TFA in  $\text{CH}_2\text{Cl}_2$  (10 ml) at room temperature and stirring was maintained for 3 hrs. The solvent was then removed under reduced pressure. To this residue was added  $\text{CH}_2\text{Cl}_2$  (15 ml) and the solution was cooled to  $0^\circ\text{C}$ . To this was added 4-nitrophenyl chloroformate (1.16 gm) and then DIEA (2.7 ml) was added dropwise. Stirring was continued for 3.5 hrs as the reaction warmed to room temperature. The reaction mixture was then partitioned between 0.5M HCl (30 ml) and more  $\text{CH}_2\text{Cl}_2$  (20 ml). The HCl was then washed with  $\text{CH}_2\text{Cl}_2$  (20 ml). The combined  $\text{CH}_2\text{Cl}_2$  extracts were then washed with brine (20 ml), dried over  $\text{MgSO}_4$ , and evaporated *in vacuo*. This crude material was purified using flash chromatography (hexane/EtOAc, 3:1) thus affording the desired product (1.36 gm, 74%).

MS (DCI) 353 (M+H)<sup>+</sup>

Step D: Preparation of ethyl 2-[(1-{[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]carbonyl}-4-piperidyl)oxy]acetate.

To the material obtained in Example 1, Step A (100 mg) at room temperature under argon was added 40% TFA in  $\text{CH}_2\text{Cl}_2$  (3 ml) and stirring was maintained for 0.5 hrs. The solvent was then removed under reduced pressure. To this residue was added DMF (2 ml) at room temperature under argon followed by the material from Step C of this example (116 mg) and then DIEA (0.31 ml). This solution was then warmed to  $100^\circ\text{C}$  and stirred for 2 days. After cooling to room temperature, brine (10 ml) was added followed by  $\text{H}_2\text{O}$  (2 ml). This solution was washed with EtOAc (2 x 15 ml), and the EtOAc was then dried with  $\text{Na}_2\text{SO}_4$  and evaporated. The crude product was purified with RP-HPLC.

MS (ES) 445 (M+H)<sup>+</sup>

Step E: Preparation of the title compound.

The ester obtained above was readily hydrolyzed while lyophilizing due to a defrosting of the sample. It was purified utilizing RP-HPLC.

MS (ES) 417 (M+H)<sup>+</sup>

5 ELISA: IC<sub>50</sub>=0.129 μM

PRP: IC<sub>50</sub>=2.65 μM

### Example 12

Preparation of 3-oxo-3-(4-{[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]carbonyl} piperidino)propanoic acid.

10

Step A: Preparation of 4-benzyl 1-(*tert*-butyl) 1,4-piperidinedicarboxylate.

To 1-(*tert*-butoxycarbonyl)-4-piperidinecarboxylic acid (5 gm) in CH<sub>2</sub>Cl<sub>2</sub> (40 ml) at room temperature under argon was added DCC (5.4 gm), DMAP (0.8 gm), and then benzyl alcohol (22.6 ml). The mixture was then stirred overnight. After evaporation of the solvent under reduced pressure, the residue was purified using dry column chromatography (2-3 column volumes of Hexane/EtOAc, 9:1) to afford the desired product (4.92 gm, 70%).

15

MS (CI) 320 (M+H)<sup>+</sup>

20

Step B: Preparation of benzyl 1-(3-ethoxy-3-oxopropanoyl)-4-piperidine carboxylate.

Treatment of the material from Step A in this example (4.9 gm) with neat TFA (25 ml) at 0°C for ½ hr followed by evaporation under vacuum gave 7.4 gm of the deprotected amine. To this material (1.4 gm) was added CH<sub>2</sub>Cl<sub>2</sub> (6 ml) under argon followed by

25

cooling to 0°C. Then DIEA (5 ml) was added slowly followed by slow dropwise addition of ethyl malonyl chloride (1.1 gm). After stirring overnight as it warmed to room temperature, the reaction mixture was mixed with saturated NaHCO<sub>3</sub> (15 ml). This mixture was washed with CH<sub>2</sub>Cl<sub>2</sub> (3 x 30 ml) and the CH<sub>2</sub>Cl<sub>2</sub> was then dried with MgSO<sub>4</sub> and evaporated under vacuum. The crude product was purified using flash chromatography (gradient elution from 10-30% EtOAc in hexane) to afford the desired material (0.56 gm). MS (CI) 334 (M+H)<sup>+</sup>

Step C: Preparation of 1-(3-ethoxy-3-oxopropanoyl)-4-piperidinecarboxylic acid.

The benzyl ester (0.56 gm) from Step B of this example was dissolved in EtOH (30 ml) at room temperature. Then Pd(OH)<sub>2</sub>/C (Pearlman's Catalyst, 100 mg) was added and the solution was shaken on a Parr hydrogenation apparatus at 50 psi of H<sub>2</sub> for 2.5 hrs. Filtration of the catalyst through Celite and evaporation of the solvent under vacuum gave the desired acid (0.392 gm, 96%).

MS (ES) 244 (M+H)<sup>+</sup>

Step D: Preparation of ethyl 3-oxo-3-(4-{[9-(4-pyridyl)-3,9-diazaspiro[5.5]undec-3-yl]carbonyl}piperidino)propanoate.

To the material obtained in Example 1, Step A (100 mg) at room temperature under argon was added 40% TFA in CH<sub>2</sub>Cl<sub>2</sub> (3 ml) and stirring was maintained for 2 hrs. The solvent was then removed under reduced pressure. To this residue was added DMF (3 ml) at room temperature under argon followed by HBTU (834 mg), the acid from Step C of this example (80 mg), and then DIEA (0.31 ml). After stirring overnight at room temperature, the solution was mixed with brine (10 ml) and H<sub>2</sub>O (3 ml). This mixture was then washed with EtOAc (2 x 20 ml). Analysis of the organic and aqueous layers revealed the desired product to be only in the H<sub>2</sub>O, so it was lyophilized and purified via RP-HPLC to afford the target ester (27 mg, 20%).

MS (IS) 457 (M+H)<sup>+</sup>

Step E: Preparation of the title compound.

The ester from Step D in this example was hydrolyzed by substantially following the procedure from Example 5, Step B to afford the title compound as a white fluffy solid in quantitative yield.

MS (ES) 429 (M+H)<sup>+</sup>

ELISA: IC<sub>50</sub>=0.039 μM

PRP: IC<sub>50</sub>=1.77 μM

10

### Example 13

Preparation of (2S)-2-{[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoic acid

StepA: Preparation of 3-{2[(3-Azaspiro[5.5]undecane-9-carbonyl)formic acid

15

The synthesis of the starting material was accomplished as described in US patent #5,451,578 from 1-benzyl-4-piperidone. The acid is then converted to ethyl ester and deprotection of Boc in one step with EtOH/HCl(g).

20 Step B: Preparation of Ethyl-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl} formate

To the piperidine-ester (130mg, 0.5mmol), 4-bromopyridine (104mg, 0.535mmol), Pd<sub>2</sub>(dba)<sub>3</sub> (15mg, 0.016mmol), S-BINAP (25mg, 0.04mmol), NaO-*t*-Bu (196mg, 2.04mmol), and toluene (6mL) were mixed together under argon. The reaction mixture was then heated to 90°C for 12h. The reaction mixture is then cooled to room temperature, taken up in EtOAc washed with brine. The organic layer is then dried, filtered and evaporated to give crude product. The RP-HPLC purification afforded 115mg(75%) of the desired spirocycle with pyridine. MS (ES) 275 (M+H)<sup>+</sup>

Step C: Preparation of Ethyl (2S)-2-{[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoate

To the DMF (3mL) solution of the acid from Step B (102mg, 0.372mmol) added EDC (78mg, 0.409mmol, HOBt (568mg, 0.409mmol), and the resulting suspension was stirred for 30 min at room temperature. To this mixture was added DMF solution (2mL) of ethyl(2S)-3-amino-2-{[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}propanoate (162mg, 0.558mmol, synthesized as reported in US Patent No. 5648368) and DIEA (260uL, 1.48mmol). The reaction mixture was stirred at room temperature overnight. EtOAc was added and the solution was washed with 10% citric acid, brine, 10% NaHCO<sub>3</sub>, dried, and concentrated. Purification on RP-HPLC gave 145mg of the product. MS (ES) 548 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.03 (t, 1H), 7.98 (d, 2H), 7.03 (d, 2H), 3.97 (t, 1H), 3.92 (q, 2H), 3.60 (m, 6H), 2.49 (s, 3H), 2.29 (s, 3H), 2.10 (m, 1H), 1.78-1.46 (m, 11H), 1.22 (m, 3H), 1.05 (t, 3H)

Step D: Preparation of (2S)-2-{[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoic acid

The hydrolysis of ester (73mg, 0.13mmol) from Step C was carried out with 3N HCl at 60°C for 3h. The solvent was evaporated and the residue purified by RP-HPLC to afford 65mg (80%) of the product. MS (ES) 520 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.02

(t, 1H), 7.97 (d, 2H), 7.03 (d, 2 H), 3.97 (t, 1H), 3.96 (dd, 1H), 3.60 (m, 6H), 2.48 (s, 3H), 2.29 (s, 3H), 2.10 (m, 1H), 1.78-1.46 (m, 11H), 1.22 (m, 3H), 1.05 (t, 3H)

#### Example 14

Preparation of (2S)-2-{[(4-methylphenyl)sulfonyl]amino}-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoic acid

10 Step A: Preparation of Ethyl (2S)-2-{[(benzyloxy)carbonyl]amino}-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoate

To the DMF (3mL) solution of the acid (70mg, 0.256mmol, Step B, Example 13) added DCC(74mg, 0.358mmol, HOBt (46mg, 0.332mmol), and the resulting suspension was stirred for 30 min at room temperature. To this mixture was added DMF solution (1mL) of ethyl(2S)-3-amino-2-{[(benzyloxy)carbonyl]amino}propanoate (102mg, 0.384mmol, for synthesis see US Patent 5648368). The reaction mixture was stirred at room temperature overnight, EtOAc was added and the solution was washed with 10% citric acid, brine, 10%  $NaHCO_3$ , dried, and concentrated. Purification on RP-HPLC gave 80mg(60%) of the product.

MS(ES) 523 (M+H)<sup>+</sup>

Step B: Preparation of Ethyl (2S)-2-amino-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl] carbonyl}amino)propanoate

5

The carbobenzyloxy-protected product (56mg) from Step A was dissolved in 5 mL of EtOH, and to this added 10% Pd/C (20mg). The reaction was stirred under 1atm of H<sub>2</sub> for 4h. The catalyst was filtered through celite, and filtrate concentrated to give the product (34mg, 99%) as an oil. MS (ES) 389 (M+H)<sup>+</sup>.

10 Step C: Preparation of Ethyl (2S)-2-{{[(4-methylphenyl)sulfonyl]amino}-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoate

15 To the CH<sub>2</sub>Cl<sub>2</sub> solution (2mL) of the spirocycle-aminoester (33.2mg, 0.086mmol) from Step B added DIEA (36uL, 0.256mmol) and p-toluenesulfonyl chloride (19.6mg, 0.103mmol). The resulting solution was stirred at room temperature overnight. The solution was extracted with EtOAc, washed with 10%HCl, dried, filtered, and concentrated to afford crude sulfonamide. The residue was purified by RP-HPLC to afford 30mg (64%) of the pure product.

20 MS (ES) 543 (M+H)<sup>+</sup>

Step D: Preparation of (2S)-2-{{[(4-methylphenyl)sulfonyl]amino}-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoic acid

The hydrolysis of the ester (30mg, 0.055mmol) from step C was carried out with 3N HCl at 60°C for 6h. The solvent was evaporated and the residue purified by RP-HPLC to afford 25mg (88%) of the product. MS (ES) 515 (M+H)<sup>+</sup>

ELISA: IC<sub>50</sub> = 0.001 μM

PRP (ADP-Citrate) IC<sub>50</sub> = 0.098 μM

PRP (ADP-PPACK) IC<sub>50</sub> = 0.169 μM

### Example 15

Preparation of (2S)-2-[[[(butylsulfonyl)amino]-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoic acid

10

Step A: Preparation of Ethyl (2S)-2-[[[(butylsulfonyl)amino]-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoate

15

To the CH<sub>2</sub>Cl<sub>2</sub> solution (5mL) of Ethyl (2S)-2-amino-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoate (69mg, 0.178mmol) from Step B of Example 14, added DIEA (78uL, 0.444mmol) and n-butylsulfonyl chloride (51uL, 0.391mmol). The reaction was stirred at room temperature overnight. The solution was extracted with EtOAc, washed with 10%HCl, dried, filtered, and concentrated to afford crude butylsulfonyl amide. The residue was purified by RP-HPLC to afford 35mg (40%) of the pure product. MS (ES) 509 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 7.98(d, 2H),

20

7.03 (d, 2H), 4.1 (q, 2H), 3.59 (m, 3H), 3.53-3.48 (m, 1H), 3.33-3.30 (m, 1H), 2.97 (t, 2H), 2.10 (m, 1H), 1.77-1.33 (m, 10H), 1.23 (t, 4H), 0.89 (t, 3H)

Step B: Preparation of (2S)-2-[[[(butylsulfonyl)amino]-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoic acid

The hydrolysis of ester (30mg, 0.055mmol) from step C was carried out with 3N HCl at 60°C for 6h. The solvent was evaporated and the residue purified by RP-HPLC to afford 25mg (88%) of the product. MS (ES) 481 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 7.95(d, 2H), 7.01 (d, 2H), 4.06 (m, 1H), 3.56 (m, 5H), 3.24-3.19 (m, 3H), 2.95 (t, 2H), 2.10 (m, 1H), 1.77-1.58 (m, 16H), 0.85 (t, 3H)

ELISA: IC<sub>50</sub> = 0.010 μM

PRP (PPACK) IC<sub>50</sub> = 0.686 μM

#### Example 16

Preparation of (2S)-2-[[[(butyloxyl)carbonyl]amino]-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoic acid

Step A: Preparation of Ethyl-(2S)-2-[[[(butyloxyl)carbonyl]amino]-3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)propanoate

To the DMF solution (3mL) of 3-{{[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}formic acid (104mg, 0.380mmol) added EDC (80mg, 0.418mmol), HOBT (56mg, 0.418mmol), DIEA (330uL, 1.90mmol), and the resulting suspension was stirred for 30 min at room temperature. To this added DMF solution (2mL) of Ethyl(2S)-3-

amino-2-[[[(butyloxy)carbonyl]amino]propanoate (132mg, 0.570mmol) and stirred the reaction mixture at room temperature for 24h. Following dilution with EtOAc it was washed with 10%HCl, 10%NaHCO<sub>3</sub>, sat'd brine, dried, filtered and evaporated to give the crude product. This was purified by RP-HPLC to give 70mg (38%) of the desired product. MS (ES) 489 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 7.98 (d, 2H), 7.03 (d, 2H), 4.21 (t, 1H), 4.10 (bt, 2H), 3.97 (t, 2H), 3.59-3.40 (m, 6H), 2.10 (m, 1H), 1.77-1.46 (m, 9H), 1.32 (m, 1H), 1.20 (t, 4H), 0.87 (t, 3H)

Step B: Preparation of (2S)-2-[[[(butyloxy)carbonyl]amino]-3-([3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl)amino]propanoic acid

The hydrolysis of the ester (30mg, 0.06mmol) from Step A was carried out with 3N HCl at 60°C for 3h. The solvent was evaporated and the residue purified by RP-HPLC to afford 20mg (72%) of the product.

MS (ES) 461 (M+H)<sup>+</sup>

PRP (ADP) IC<sub>50</sub> = 1.88 μM

#### Example 17

Preparation of 3-([3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl)amino)butanoic acid

Step A: Preparation of DL-Ethyl-3-aminobutyrate

To the commercially available Boc-DL-3-aminobutyric acid (684mg, 3.37mmol) in EtOH (15mL) added thionyl chloride (614μL, 8.42mmol) and the mixture was refluxed for 3h.

After cooling the solvent was evaporated to afford the desired ester as a white solid.

MS (ES) 132 (M+H)<sup>+</sup>

Step B: Preparation of Ethyl-3-([3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonylamino)butanoate

To the DMF solution (2mL) of 3-([3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}formic acid (51mg, 0.186mmol) added EDC (40mg, 0.205mmol), HOBt (28mg, 0.205mmol), DIEA (162uL, 0.93mmol), and the resulting suspension was stirred for 30 min at room temperature. To this added DMF solution (1mL) of Ethyl(DL)-3-aminobutyrate (36.6mg, 0.279mmol) and stirred the reaction mixture at room temperature for 18h. Following dilution with EtOAc it was washed with 10%HCl, 10%NaHCO<sub>3</sub>, sat'd brine, dried, filtered and evaporated to give the crude product. This was purified by RP-HPLC to give 40mg (55%) of the desired product. MS (ES) 388 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 7.98 (d, 2H), 7.02 (d, 2H), 4.19 (m, 1H), 4.04 (q, 2H), 3.59–3.56 (m, 4H), 2.39 (t, 2H), 2.06 (m, 1H), 1.76–1.43 (m, 11H), 1.16 (t, 3H), 1.09 (d, 6H)

Step C: Preparation of 3-([3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonylamino)butanoic acid

The hydrolysis of the ester (20mg, 0.05mmol) from Step B was carried out with 3N HCl at 60°C for 3h. The solvent was evaporated and the residue purified by RP-HPLC to afford 15mg (82%) of the product. MS (ES) 360 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 7.73 (d, 2H), 6.78 (d, 2H), 3.92 (m, 1H), 3.36–3.25 (m, 4H), 2.15–2.09 (m, 2H), 1.87 (m, 1H), 1.56–1.22 (m, 11H), 0.85 (d, 6H)

PRP (ADP) IC<sub>50</sub> = 14.8 μM

#### Example 18

Preparation of 3-methyl-4-([3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)butanoic acid

Step A: Preparation of ethyl 4-amino-3-methyl butanoate

To ethyl trans crotonate (1g, 124.35mmol) added nitromethane (34mL, 621.7mmol), tetramethyl guanidine (3.1mL, 25mmol), and stirred the reaction at room temperature for 18h. To this added EtOAc, washed with 10% HCl, brine, dried, filtered and evaporated to give crude residue. The crude material was chromatographed on silica gel (20% EtOAc/Hexane) to afford desired product as colorless oil (60%). MS(ES) 176 (M+H)<sup>+</sup>

The colorless oil (456mg, 2.60mmol) was suspended in glacial acetic acid (8mL), to this added 10%Pd/C (100mg) and was stirred overnight under 1atm of H<sub>2</sub>. The reaction mixture was filtered through celite and evaporated out the acetic acid to afford the desired amino-ester (350mg, 92%). MS (ES) 146 (M+H)<sup>+</sup>

Step B: Preparation of Ethyl 3-methyl-4-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)butanoate

To the DMF solution (2mL) of 3-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}formic acid (41mg, 0.150mmol) added EDC (32mg, 0.165mmol), HOBT (22mg, 0.165mmol), DIEA (131uL, 0.75mmol), and the resulting suspension was stirred for 30 min at room temperature. To this added DMF solution (1mL) of ethyl 4-amino-3-methyl butanoate (33mg, 0.225mmol) and stirred the reaction mixture at room temperature for 18h. The solvent was evaporated and the residue was purified by RP-HPLC to give 40mg (66%) of the desired product. MS (ES) 402 (M+H)<sup>+</sup>

Step C: Preparation of 3-methyl-4-({[3-(4-pyridyl)-3-azaspiro[5.5]undec-9-yl]carbonyl}amino)butanoic acid

The hydrolysis of the ester (20mg, 0.05mmol) from Step B was carried out with 3N HCl at 60°C for 3h. The solvent was evaporated and the residue purified by RP-HPLC to afford 15mg (82%) of the product. MS (ES) 374 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 7.97 (d, 2H), 7.02 (d, 2H), 3.58-3.54 (m, 4H), 3.01 (d, 3H), 2.30-1.97 (m, 6H), 1.87 (m, 1H), 1.76-1.42 (m, 12H), 1.18 (m, 4H), 0.87 (d, 3H)

PRP (ADP) IC<sub>50</sub> = 3 μM

Example 19

Preparation of 3-oxo-3-(4-{[8-(4-pyridyl)-2,8-diazaspiro[4.5]dec-2-yl]carbonyl}piperidino)propanoic acid:

5

Step A: Preparation of 8-benzyl-2-oxa-8-azaspiro[4.5]decane-1,3-dione

The synthesis of this material was accomplished as described in WO 97/11940

10

Step B: Preparation of 1-benzyl-4-{2-[(4-methoxybenzyl)amino]-2-oxoethyl}-4-piperidinecarboxylic acid

15 The anhydride from Step A (18.8 gm, 72.3 mmol) was dissolved in 250 ml of anhydrous acetonitrile. To this solution was added (4-methoxyphenyl)methylamine (10.4 ml, 79.5 mmol, commercially available) and the reaction was stirred overnight at room temperature. The solvent was evaporated yielding 32.6 gm (>100%) of the product.

MS (ES) 397 (M+H)<sup>+</sup>

20

Step C: Preparation of 8-benzyl-2-(4-methoxybenzyl)-2,8-diazaspiro[4.5]decane-1,3-dione

- The material from Step B (32.6 gm, 82.2 mmol) was dissolved in 300 ml of acetic anhydride. To this solution was added sodium acetate (33.7 gm, 411 mmol). After refluxing overnight, the reaction was filtered to remove solids and the solvent evaporated.
- 5 The residue was purified by flash chromatography yielding 18.3 gm (61%) of the product.

MS (ES) 379 (M+H)<sup>+</sup>

Step D: Preparation of 8-benzyl-2-(4-methoxybenzyl)-2,8-diazaspiro[4.5]decane

10

- The material from Step C was dissolved in 100 ml of anhydrous THF. BH<sub>3</sub>-THF complex (686 ml, 686 mmol) was then slowly added, and the mixture was refluxed overnight under argon. The reaction was cooled to 0°C and quenched with water. The organic solvent was evaporated and the pH raised to 10 with conc. NaOH. The aqueous
- 15 phase was saturated with NaCl and extracted 3x with EtOAc. The organic phases were combined and the solvent evaporated to afford 6.4 gm (66%) of product.

MS (ES) 351 (M+H)<sup>+</sup>

Step E: Preparation of 8-benzyl-2,8-diazaspiro[4.5]decane

- 20 The product from Step D was dissolved in 91.5 ml of 5% H<sub>2</sub>O/acetonitrile and cooled to 0°C. Ammonium cerium (IV) nitrate (30 gm, 55mmol) was slowly added and the reaction was allowed to warm to room temperature overnight. The solvent was evaporated and the residue purified using RP-HPLC yielding 2.4 gm (57%) of product.

MS (ES) 231 (M+H)<sup>+</sup>

- 25 Step F: Preparation of *tert*-butyl 8-benzyl-2,8-diazaspiro[4.5]decane-2-carboxylate

The product from Step E was dissolved in 30 ml of  $\text{CH}_2\text{Cl}_2$ . To this solution was added DIEA (5.4 ml, 31.4 mmol), DMAP (12.1 mg, 0.1 mmol), and di-*tert*-butyl dicarbonate (2.5 gm, 11.5 mmol). The reaction mixture was stirred overnight at room temperature. The solvent was evaporated and the residue purified by RP-HPLC yielding 1.4 gm (29%) of the product.

MS (ES) 331 (M+H)<sup>+</sup>

Step G: Preparation of *tert*-butyl 2,8-diazaspiro[4.5]decane-2-carboxylate

The product from Step F was dissolved in 20 ml of methanol. To this solution was added  $\text{Pd}(\text{OH})_2/\text{C}$  (0.14gm). The reaction mixture was then hydrogenated overnight at 500 psi, filtered through celite, and the solvent evaporated to afford 1.0 gm (100%) of the product.

MS (ES) 241 (M+H)<sup>+</sup>

Step H: Preparation of *tert*-butyl 8-(4-pyridyl)-2,8-diazaspiro[4.5]decane-2-carboxylate

To the product from Step G was added 4-bromopyridine hydrochloride (877 mg, 4.5 mmol), *s*-BINAP (0.105 mg, 0.17 mmol), sodium *tert* butoxide (788 mg, 8.2 mmol), and tris(dibenzylideneacetone)-dipalladium(0)-chloroform adduct (70 mg, 0.068 mmol). Then 25 ml of anhydrous toluene was added under argon. The reaction mixture was heated to 100°C and stirred overnight. After cooling to room temperature, EtOAc (50 ml) was added to the reaction mixture. The solution was filtered through celite and the solvent evaporated. The residue was purified by RP-HPLC yielding 291 mg (22%) of the desired product.

MS (ES) 318 (M+H)<sup>+</sup>

Step I: Preparation of 8-(4-pyridyl)-2,8-diazaspiro[4.5]decane

The product from Step H (35 mg, 0.16 mmol) was dissolved in 50 % TFA/CH<sub>2</sub>Cl<sub>2</sub> (10 ml) and stirred at room temperature for 30 minutes. The solvent was evaporated to yield 37 mg (100%) of product.

MS (ES) 231 (M+H)<sup>+</sup>

5

Step J: Preparation of ethyl 3-oxo-3-(4-{[8-(4-pyridyl)-2,8-diazaspiro[4.5]dec-2-yl]carbonyl}piperidino)propanoate

10 The product from Step I (37 mg, 0.16 mmol) was dissolved in DMF (4.0 ml). To this solution was added DIEA (0.24ml, 1.4 mmol), HBTU (95 mg, 0.253 mmol), and 1-(3-ethoxy-3-oxopropanoyl)-4-piperidinecarboxylic acid (62 mg, 0.253 mmol) (see Step C Example 12). The reaction mixture was stirred at room temperature overnight. The solvent was evaporated and the residue was purified by RP-HPLC to afford 25 mg (36%) of the product.

15

MS (ES) 443 (M+H)<sup>+</sup>

Step K: Preparation of 3-oxo-3-(4-{[8-(4-pyridyl)-2,8-diazaspiro[4.5]dec-2-yl]carbonyl}piperidino)propanoic acid

20

The ester from Step J (12.1 mg, 0.027 mmol) was dissolved in 4.0 ml of dioxane. To this solution was added 1M LiOH (0.164mL, 0.164 mmol), and the resulting reaction mixture was stirred overnight at room temperature. The solvent was evaporated and the residue purified by RP-HPLC to afford 3.9 mg (34%) of the title compound.

### Example 28

Preparation of 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane  
 20

Step A: Preparation of 8-Benzyl-2-(4-pyridyl)-2,8-diazaspiro[4.5]decane-1,3-dione

1-Benzyl-4-(carboxymethyl)-4-piperidinecarboxylic acid hydrochloride (WO 97/11940) (23.0 mMol) in DMF (60.0 mL) was treated with DCC (25.0 mMol), and the soon-formed colorless suspension was stirred at room temperature for 2.0 h.

- 5 This anhydride, 8-benzyl-2-oxa-8-azaspiro[4.5]decane-1,3-dione, was then treated with 4-amino pyridine (30.0 mMol), and DIEA (70.0 mMol). The suspension was first stirred at room temperature for 15 h, and then heated to 100 °C for 6 h. Dicyclohexyl urea was filtered off and the clear filtrate was concentrated to yield a brown glue (half-cyclized amide acid).
- 10 This was then mixed with NaOAc (230.0 mMol) and acetic anhydride (100.0 mL), and heated to reflux for 2.0 h. The mixture was filtered and the filtrate was concentrated to yield the crude imide. Trituration with ether yielded the title compound as a colorless solid (63% overall).

- 15 Step B: Preparation of 8-Benzyl-2-(4-pyridyl)-2,8-diazaspiro[4.5]decane

- The imide (12.0 mMol) from step A was treated with  $\text{BH}_3$ . THF (1.0 M in THF) (300.0 mMol) and the mixture was refluxed for 30 h. It was cooled to 0 °C and quenched with ice (EXOTHERMIC!), and then treated with 1N NaOH to a pH of ca. 10-11. The mixture was then extracted with EtOAc. Concentration of the EtOAc extract yielded the title compound.
- 20

MS:  $(\text{M}+\text{H})^+ = 308$ .

Step C: Preparation of 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane hydrochloride

- 25 The crude product from Step B (25.0 mMol) was suspended in EtOH (50.0 mL) and diluted with 1N HCl (50.0 mL). 10% Pd/C (1.50 g) was added and the mixture was shaken on a Parr hydrogenator at 50 psi for 24 h. It was then filtered and the clear, colorless filtrate was concentrated to yield a colorless hygroscopic solid (61%).

MS:  $(M+H)^+ = 218$ .

### Example 29

- 5 Preparation of 2-(2-oxo-4-((2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)carbonyl)piperazino)acetic acid:

- Step A: Preparation of 4-nitrophenyl 4-(2-ethoxy-2-oxoethyl)-3-oxo-1-piperazinecarboxylate

10

- Ethyl 2-(2-oxopiperazinyl)acetate (500 mg, 2.7 mmol) was dissolved in anhydrous  $CH_2Cl_2$  (10mL) and cooled to  $0^\circ C$ . To this solution was added DIEA (1.0 ml, 5.7 mmol) and 4-nitrophenyl chloroformate (600 mg, 3.0 mmol). The reaction mixture was stirred overnight and allowed to warm to room temperature. The reaction was poured into a brine solution and extracted 3x with EtOAc. The organic layers were combined and the solvent evaporated. The resulting residue was purified by flash chromatography yielding 500 mg (55.0%) of the desired product.

MS (ES) 338  $(M+H)^+$

- 20 Step B: Preparation of ethyl 2-(2-oxo-4-[[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl]piperazino)acetate

The product from Step C Example 28 (21 mg, 0.090 mmol) was dissolved in anhydrous DMF (2.0 ml). To this solution was added DIEA (0.182 ml, 0.105 mmol) and ethyl 2-{4-[(4-nitrophenyl)oxycarbonyl]-2-oxopiperazinyl}acetate (61 mg, 0.174 mmol). The reaction mixture was stirred overnight at 100°C under argon. The solvent was evaporated and the residue was purified by RP-HPLC to afford 44.8 mg (70%) of the product.

MS (ES) 430 (M+H)<sup>+</sup>

Step C: Preparation of 2-(2-oxo-4-((2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)carbonyl)piperazino)acetic acid:

The ester from Step B (44.8 mg, 0.104 mmol) was dissolved in 2.0 ml of 2N HCl and stirred for 2 hours at room temperature. The solvent was evaporated and the residue purified by RP-HPLC to afford 18.8 mg (45%) of the title compound.

MS (ES) 402 (M+H)<sup>+</sup>

ELISA IC<sub>50</sub>=0.122 μM PRP (ADP-Citrate) IC<sub>50</sub>=2.65 μM

### Example 30

Preparation of 3-(2-oxo-4-((2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)carbonyl)piperazino)propanoic acid:

Step A: Preparation of benzyl 4-(3-ethoxy-3-oxopropyl)-3-oxo-1-piperazine carboxylate

- Phenylmethyl 3-oxopiperazinecarboxylate (234 mg, 1.0 mmol) was dissolved in anhydrous DMF (5mL) and cooled to 0°C. To this solution was added NaH (44 mg, 1.1 mmol). The reaction mixture was stirred for 1 hour and allowed to warm to room temperature. The reaction was cooled to 0°C and bromo ethyl propionate (0.144 ml, 1.1 mmol) was added. The reaction was stirred overnight and allowed to warm to room temperature. The reaction was poured into brine and extracted 3x with EtOAc. The organic layers were combined and the solvent evaporated. The resulting residue was purified by flash chromatography yielding 250 mg (75.0%) of the desired product.

MS (ES) 335 (M+H)<sup>+</sup>

- 10 Step B: Preparation of ethyl 3-(2-oxopiperazino)propanoate

The product from Step A was dissolved in ethanol (20 ml). To this solution was added Pd(OH)<sub>2</sub>/C (25 mg). The reaction mixture was then hydrogenated overnight at 50 psi, filtered through celite and the solvent evaporated to afford 150 mg (100%) of the product.

- 15 MS (ES) 201 (M+H)<sup>+</sup>

Step C: Preparation of 4-nitrophenyl 4-(3-ethoxy-3-oxopropyl)-3-oxo-1-piperazinecarboxylate

- 20 The product from Step B was dissolved in anhydrous CH<sub>2</sub>Cl<sub>2</sub> (10 ml) and cooled to 0°C. To this solution was added DIEA (0.323 ml, 1.9 mmol) and 4-nitrophenyl chloroformate (200 mg, 0.974 mmol). The reaction mixture was stirred overnight and allowed to warm to room temperature. The reaction was poured into brine and extracted 3x with EtOAc. The organic layers were combined and the solvent evaporated. The resulting residue was purified by flash chromatography yielding 218 mg (60%) of the desired product.

MS (ES) 366 (M+H)<sup>+</sup>

Step D: Preparation of ethyl 3-(2-oxo-4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperazino)propanoate

- The product from Step C Example 28 (21 mg, 0.090 mmol) was dissolved in anhydrous DMF (2.0 ml). To this solution was added DIEA (0.182 ml, 0.105 mmol) and the product from Step C (61 mg, 0.174 mmol). The reaction mixture was stirred overnight at 100°C under argon. The solvent was evaporated and the residue was purified by RP-HPLC to afford 27 mg (67%) of the product.

MS (ES) 444 (M+H)<sup>+</sup>

Step E: Preparation of 3-(2-oxo-4-((2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)carbonyl)piperazino)propanoic acid

- The ester from Step D (44.8 mg, 0.104 mmol) was dissolved in 2.0 ml of 2N HCl and stirred for 2 hours at room temperature. The solvent was evaporated and the residue purified RP-HPLC to afford 18.8 mg (45%) of the title compound.

MS (ES) 416 (M+H)<sup>+</sup>

PRP (ADP-Citrate) IC<sub>50</sub> = 1.29 μM

15

### Example 31

Preparation of 3-oxo-3-(4-{-[(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperazino)propanoic acid

- 20 Step A:

- To the DMF (2mL) solution of N'-CBz-piperazine (660mg, 3mmol) added DIEA (2.1mL, 12mmol) this was cooled to 0°C and then to this slowly added ethyl malonyl chloride (677mg, 4.5mmol). The reaction mixture was stirred at room temperature overnight, then solvent was evaporated. The residue suspended in water and extracted with EtOAc. The organic layer was washed with sat'd brine, dried, filtered and

evaporated to give golden yellow oil. The residue was purified on silica gel chromatography (20%EtOAc/Hexane) to afford 750mg (74%) of the desired product.

**Step B:**

To the EtOH solution (10mL) of N'-CBz-N'-acylated piperazine (408mg) from Step A of this example, added 10%Pd/C (100mg) and this was stirred under 1atm of H<sub>2</sub> for 3h. The solution was filtered through celite and evaporated to give the desired product (228mg, 95%) as a colorless oil.

**Step C:** Preparation of 4-nitrophenyl-4-(3-oxo-3-propoxypropanoyl)-1-piperazine carboxylate

10

To the CH<sub>2</sub>Cl<sub>2</sub> solution (5mL) of piperazine (348mg, 1.7mmol) from above Step B, added DIEA (740uL, 4.25mmol) and the reaction was cooled to 0°C. To this cold solution added p-nitrophenylchloroformate (342uL, 1.7mmol) and then reaction slowly warmed up to room temperature. After stirring for 4h, the reaction mixture was diluted with CH<sub>2</sub>Cl<sub>2</sub> washed with sat'd NaHCO<sub>3</sub>, dried, filtered and evaporated to afford the crude residue. The residue was purified on silica gel chromatography (5%MeOH/CH<sub>2</sub>Cl<sub>2</sub>) to afford the desired product as a yellow oil (270mg).

15

**Step D:** Preparation of Ethyl 3-oxo-3-(4-{[-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperazino) propanoate

20

To the cold (0°C) DMF (1mL) solution of p-nitrophenyl carbamate (119mg, 0.32mmol) from Step C added DIEA (325uL, 1.85mmol) followed by DMF (1mL) solution of 2-(4-pyridyl)2,8-diazaspiro[4.5]undecane as an HCl salt (100mg, 0.31mmol, from Step C, Example 28). The clear solution was heated to 75°C for 18h, then cooled and the solvent was evaporated. The residue was suspended in CH<sub>2</sub>Cl<sub>2</sub>, washed with 10% NaHCO<sub>3</sub>, dried, filtered and evaporated give the crude residue. The residue was purified by RP-HPLC to give the desired product as white solid (90mg, 70%) MS (DCI) 443 (M+H)<sup>+</sup>.

### Example 32

- 15 Preparation of 2-{4-(2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)piperidino}acetic acid

Step A: Preparation of ethyl 4-piperidinoacetate

- 20 To the CH<sub>3</sub>CN solution (10mL) of 4-piperidone hydrate (307mg, 2mmol), added K<sub>2</sub>CO<sub>3</sub> (608mg, 4.4mmol), followed by ethyl iodoacetate (300uL, 2.52mmol) and the reaction mixture was refluxed for 24h. After that filtered the salts, added EtOAc to the filtrate and washed with sat'd brine. The organic layer was dried, filtered and evaporated to give the
- 25 desired product as a white solid (290mg, 78%).

Step B: Preparation of ethyl 2-{4-(2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)piperidino}acetate

To the CH<sub>3</sub>OH solution (1mL) of ketone (57mg, 0.305mmol, from Step A) added KOH(12mg, 0.2mmol), followed by CH<sub>3</sub>OH (1mL) solution of 2-(4-pyridyl)-2,8-diazaspiro[4.5]undecane (130mg, 0.4mmol, Step C, Example 28) and sodium cyanoborohydride (50mg, 0.8mmol). The reaction mixture was stirred overnight at room temperature, to that then added 10%HCl and evaporated the solvent. The residue was purified by RP-HPLC to afford the desired product as a white solid (60mg, 51%). MS (DCI) 387 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CD<sub>3</sub>OD) δ 8.10 (d, 2H), 6.84 (d, 2H), 4.31 (q, 2H), 4.12 (s, 2H), 3.81-3.58 (m, 8H), 3.28-3.02 (m, 8H), 2.49-1.99 (m, 8H), 1.29 (t, 3H)

Step C: Preparation of 2-{4-(2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)piperidino}acetic acid

To the ester from Step B (45mg) was added 2N HCl (1mL) and the reaction was heated at 60°C for 4h. After that evaporated the solvent and the residue was purified by RP-HPLC to afford 28mg of the desired acid.

MS (ES) 360 (M+H)<sup>+</sup>

PRP (ADP-Citrate) IC<sub>50</sub> = 9.5 μM

### Example 33

Preparation of 2-(4-{2-oxo-2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]ethyl}piperidino)acetic acid

Step A: Preparation of ethyl 2-(4-{2-oxo-2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]ethyl}piperidino)acetate

- To the DMF (2mL) solution of Fmoc-piperidine-4-acetic acid (93mg, 0.255mmol) added HATU (123mg, 0.325mmol), followed by DMF (2mL) solution of (4-pyridyl)2,8-diazaspiro[4.5]undecane (81mg, 0.25mmol). The reaction mixture was stirred at room temperature overnight, after that solvent was evaporated and the residue was suspended in EtOAc. The EtOAc layer was washed with 10% HCl, then the aqueous layer was basified with 10% NaOH and re-extracted with ethyl acetate. The EtOAc was dried, filtered, evaporated to give crude residue. The residue was purified by silica gel chromatography (10% MeOH/CH<sub>2</sub>Cl<sub>2</sub>) to give the desired product. MS (ES) 564 (M+H)<sup>+</sup>.
- 10 The Fmoc material was stirred in 20% piperidine in DMF for 1h, after that solvent was evaporated. The residue was purified by RP-HPLC to give the desired de-Fmoc piperidine product. MS(ES) 343 (M+H)<sup>+</sup>

- To the DMF (1mL) solution of deprotected-piperidine (25mg, 0.07mmol) added DIEA (49uL, 0.28mmol) followed by ethyl chloroacetate (11mg, 0.084mmol). The reaction was heated to 65°C for 4h, after that the solvent was evaporated and the residue purified on RP-HPLC. The purification afforded the desired product ethyl 2-(4-{2-oxo-2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]ethyl}piperidino)acetate as a white solid (20mg). MS(ES) 429(M+H)<sup>+</sup>
- 15

- Step B: Preparation of 2-(4-{2-oxo-2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]ethyl}piperidino)acetic
- 20

To the ester (10mg) added 2N HCl (500uL) and the reaction was heated at 60°C for 4h. After that evaporated the solvent and the residue was purified by RP-HPLC to afford 5mg of the desired acid. MS (ES) 401 (M+H)<sup>+</sup>

- 25 PRP (ADP-Citrate) IC<sub>50</sub> = 80 μM

#### Example 34

- Preparation of (2S)-2-{[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoic acid
- 30

Step A: Preparation of ethyl (2S)-2-([(benzyloxy)carbonyl]amino)-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoate

5

To the DMF (3mL) solution of (4S)-4-([(benzyloxy)carbonyl]amino)-5-ethoxy-5-oxopentanoic acid (prepared according to Liebig's Ann. Chem. 1961, 646, 127) (170mg, 0.55mmol) added HATU (380mg, 1mmol) followed by DMF solution (1mL) of (4-pyridyl)2,8-diazaspiro[4.5]undecane from Step C, Example 28, (163mg, 0.5mmol) and DIEA (350uL, 2mmol). The reaction mixture was stirred at room temperature overnight, then poured into water and extracted with EtOAc. The EtOAc layer was washed with 10%HCl, 10% NaHCO<sub>3</sub>, brine, dried, filtered and evaporated to give brown viscous oil. The residue was purified by RP-HPLC to afford the desired product as a yellow solid (150mg, 59%). MS (ES) 509 (M+H)<sup>+</sup>

Step B: Preparation of ethyl (2S)-2-amino-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoate

To the EtOH (5mL) solution of Cbz-protected ester from Step A (135mg) was added 10%Pd/C (60mg) and reaction was stirred for 6h at room temperature under an atmosphere of hydrogen. The catalyst was removed by filtration through celite and the filtrate was concentrated under reduced pressure to afford the desired product as a colorless viscous oil (105mg)

Step C: Preparation of ethyl (2S)-2-([(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino)-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoate

25

To the  $\text{CH}_2\text{Cl}_2$  solution (2mL) of ethyl (2S)-2-amino-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoate (105mg, 0.28mmol) added 3,5-dimethylisoxazole-4-sulfonyl chloride (61mg, 0.308mmol) followed by DIEA (100uL, 0.56mmol). The reaction mixture was stirred at room temperature overnight. After that extracted with EtOAc and washed with water, brine, dried, filtered and evaporated to give the crude residue. This residue was purified by RP-HPLC to afford the desired product as a white solid (60mg, 40%). MS (ES) 534 (M+H)<sup>+</sup>

- 10 Step D: Preparation of (2S)-2-[[[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino]-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoic acid

To the ester (20mg, 0.036mmol) from Step C added EtOH (1mL), 1M LiOH (250uL) and the reaction mixture was stirred at room temperature overnight. After that evaporated the solvent and residue purified by RP-HPLC to give the desired product (10mg). MS (ES)

- 15 506 (M+H)<sup>+</sup>

PRP (ADP-Citrate)  $\text{IC}_{50} = 0.271 \mu\text{M}$

ELISA:  $\text{IC}_{50} = 0.002 \mu\text{M}$

### Example 35

- Preparation of (2S)-2-[(butoxycarbonyl)amino]-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoic acid

- Step A: Preparation of ethyl (2S)-2-[(butoxycarbonyl)amino]-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoate

To the DMF (3mL) solution of (4S)-4-[[butoxy]carbonyl]amino}-5-ethoxy-5-oxopentanoic acid (prepared according to Step D, Example 36) (96mg, 0.352mmol) added HATU (243mg, 0.64mmol) followed by DMF solution (1mL) of (4-pyridyl)2,8-diazaspiro[4.5]undecane from Step C, Example 28, (105mg, 0.32mmol) and DIEA (225uL, 1.28mmol). The reaction mixture was stirred at room temperature overnight, then poured into water and extracted with EtOAc. The EtOAc layer was washed with 10%HCl, 10% NaHCO<sub>3</sub>, brine, dried, filtered and evaporated to give brown viscous oil. The residue was purified by RP-HPLC to afford the desired product as a yellow solid (100mg, 63%). MS (ES) 475 (M+H)<sup>+</sup>. <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 8.1 (d, 2H), 6.60 (d, 2H), 5.4 (bs, 1H), 4.28 (m, 1H), 4.13 (q, 2H), 4.00 (m, 2H), 3.56-3.35 (m, 8H), 2.4 (m, 1H), 2.20-2.01 (m, 4H), 1.62-1.51 (m, 6H), 1.35-1.29 (m, 2H), 1.24 (t, 3H), 0.87 (t, 3H)

Step B: Preparation of (2S)-2-[(butoxycarbonyl)amino]-5-oxo-5-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]pentanoic acid

To THF (1mL) solution of ester (25mg, 0.05mmol) added 1N LiOH (200uL) and the reaction mixture stirred at room temperature overnight. The solvent was evaporated and the residue purified by RP-HPLC to afford the desired product (18mg, 81%).

MS (ES) 447 (M+H)<sup>+</sup>

PRP (ADP-Citrate) IC<sub>50</sub> = 4 μM

### Example 36

Preparation of (4S)-4-[(butoxycarbonyl)amino]-5-ethoxy-5-oxopentanoic acid

Step A: Preparation of 5-(tert-butyl)-1-ethyl-(2S)-2-[[benzyloxy] carbonyl] amino} pentanedioate

To the DMF (115mL) solution of Z-Glu-(O-tBu) (10g, 29.6mmol) added EtOH (17mL), EDC.HCl (13.06g, 68mmol), HOBT (9.06g, 59mmol) and the reaction mixture was stirred at room temperature overnight. After evaporation of the DMF under reduced pressure, the residue was dissolved in EtOAc (15 mls) and washed with 10% HCl (10 mls), brine (10 mls), and dried with MgSO<sub>4</sub>. The solvent was removed *in vacuo*, and the residue was purified using flash chromatography (3% MeOH/CH<sub>2</sub>Cl<sub>2</sub>) to afford the desired product. MS (ES) 388 (M+Na), 266 (M+H-Boc). <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 5.40 (d, 1H), 5.10 (s, 2H), 4.35 (m, 1H), 4.22 (q, 2H), 2.15 (m, 1H), 1.95 (m, 1H), 1.40 (s, 9H), 1.25 (t, 3H).

10

Step B: Preparation of 5-(tert-butyl)-1-ethyl-(2S)-2-aminopentanedioate

To the CH<sub>3</sub>OH (100mL) solution of the Cbz-protected material (9.96g) from Step A added Pd(OH)<sub>2</sub>/C (500mg) and then hydrogenated at 50psi on parr hydrogenator for 4h. After that filtered through celite and concentrated to afford the desired product as a viscous oil (5.8g, 92.5%). MS (DCI) 232 (M+H<sup>+</sup>). <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 4.22 (q, 2H), 3.40 (dd, 12H), 2.30 (t, 2H), 2.00 (m, 1H), 1.6 (t, 2H), 1.75 (t, 3H), 1.41 (s, 9H), 1.20 (t, 3H).

15

Step C: Preparation of 5-(tert-butyl)-1-ethyl-(2S)-2-[(butoxycarbonyl)amino] pentanedioate

20

To the CH<sub>2</sub>Cl<sub>2</sub> solution (70mL) of the aminoester (1.63g, 7.05mmol) from Step B added DIEA (2.5mL, 14.1mmol) and this was cooled to 0°C. To this cold solution slowly added n-butyl chloroformate (1.17mL, 9.2mmol) and the reaction was slowly warmed to room temperature and stirred for 4h. After stirring the solvent was removed *in vacuo*, and the residue purified by silica gel chromatography (1%MeOH/CH<sub>2</sub>Cl<sub>2</sub>) to afford the desired product (1.65g, 70.5%). MS (DCI) 332 (M+H<sup>+</sup>). <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 5.50 (d, 1H), 4.40 (m, 1H), 4.22 (q, 2H), 4.05 (t, 2H), 2.35 (m, 2H), 2.20 (m, 1H), 1.99 (m, 1H), 1.6 (t, 2H), 1.42 (s, 9H), 1.46 (q, 2H), 1.30 (t, 3H), 0.91 (t, 3H).

25

Step D: Preparation of (4S)-4-{{(butoxycarbonyl)amino}-5-ethoxy-5-oxopentanoic acid

- To the t-butyl ester (2.61g) from Step C added 15ml TFA and the reaction mixture was stirred for 2h at 0°C. After that the solvent was evaporated and the residue triturated with ether to afford the desired product as a white solid. MS (DCI) 276 (M+H<sup>+</sup>). <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 11.2 (s, 1H), 5.50 (bs, 1H), 4.40 (m, 1H), 4.22 (q, 2H), 4.05 (t, 2H), 2.50 q, 2H), 2.20 (m, 1H), 1.99 (m, 1H), 1.6 (t, 2H), 1.46 (q, 2H), 1.30 (t, 3H), 0.91 (t, 3H)

### Example 37

- 10 Preparation of (4S)-4-{{[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}-5-ethoxy-5-oxopentanoic acid

Step A: Preparation of 5-(tert-butyl)-1-ethyl-(2S)-2-{{[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}pentanedioate

- 15 To the CH<sub>2</sub>Cl<sub>2</sub> solution (70mL) of the aminoester (3g, 12.98mmol) from Step B Example 36, added DIEA (4.5mL, 25.96mmol) and this was cooled to 0°C. To this cold solution slowly added 3,5-dimethylisoxazole-4-sulfonyl chloride (3.38g, 17.3mmol) and the reaction was slowly warmed to room temperature and stirred overnight. After
- 20 evaporation of the CH<sub>2</sub>Cl<sub>2</sub> under reduced pressure, the residue was dissolved in EtOAc (15 mls) and washed with 10% HCl (10 mls), brine (10 mls), and dried with MgSO<sub>4</sub>. The solvent was removed *in vacuo*, and the residue was purified using flash chromatography (0.5/9.5/90, MeOH/EtOAc/Hexane) to afford the desired material (3.6g, 72%) as a colorless oil. MS (ES) 413 (M+Na). <sup>1</sup>H NMR (400MHz, CDCl<sub>3</sub>) δ 5.40 (d, 1H), 4.05 (q, 2H), 3.90 (m, 1H), 2.60 (s, 3H), 2.48-2.30 (m, 2H), 2.40 (s, 3H), 2.05 (m, 1H), 1.80 (m, 1H), 1.43 (s, 9H), 1.20 (t, 3H).
- 25

Step B: Preparation of (4S)-4-[(3,5-dimethyl-4-isoxazolyl)sulfonyl]amino}-5-ethoxy-5-oxopentanoic acid

To the t-butyl ester (2.71g) from Step A added 40% TFA in  $\text{CH}_2\text{Cl}_2$  (10mL) and the reaction mixture was stirred for 2h at  $0^\circ\text{C}$ . After that the solvent was evaporated and the residue triturated with heptane to afford the desired product as a white solid (2.83g, quantitative).

MS (ES) 335 ( $\text{M}+\text{H}$ )<sup>+</sup>.  $^1\text{H}$  NMR (400MHz,  $\text{CDCl}_3$ )  $\delta$  10.2 (s, 1H), 5.6 (d, 1H), 4.10 (q, 2H), 3.80 (m, 1H), 2.6 (s, 3H), 2.55 (t, 2H), 2.40 (s, 3H), 2.15 (m, 1H), 1.80 (m, 1H), 1.30 (t, 3H).

Example 38

Preparation of (4S)-4-[(butylsulfonyl)amino]-5-ethoxy-5-oxopentanoic acid

Step A: Preparation of 5-(tert-butyl) 1-ethyl (2S)-2-[(butylsulfonyl)amino] pentandioate

To the material obtained in Step B from Example 36 (230 mgs) in  $\text{CH}_2\text{Cl}_2$  (10 mls) at  $0^\circ\text{C}$  under argon was added pyridine (0.18 mls). Then n-BuSO<sub>2</sub>Cl (0.26 mls) was added dropwise via syringe and the resulting solution was stirred overnight as it warmed to room temperature. After evaporation of the  $\text{CH}_2\text{Cl}_2$  under reduced pressure, the residue was dissolved in EtOAc (15 mls) and washed with 0.3M HCl (10 mls), brine (10 mls), and dried with  $\text{MgSO}_4$ . The solvent was removed *in vacuo*, and the residue was purified using flash chromatography (Hexane/EtOAc, 4:1) to afford the desired material (199 mgs, 57%).

MS(PES): ( $2\text{M}+\text{Na}$ )<sup>+</sup>=725, ( $\text{M}+\text{Na}$ )<sup>+</sup>=374, ( $\text{M}+\text{H}-\text{C}_4\text{H}_8$ )<sup>+</sup>=296

Step B: Preparation of the title compound

To the material from above Step A (190 mgs) was added 40%TFA in  $\text{CH}_2\text{Cl}_2$  (2 mls) at room temperature and stirring was maintained for 2 hrs. The solvent was removed under reduced pressure thus affording the desired acid as an oil (162 mgs, 100%)

MS(PES):  $(\text{M}+\text{H})^+=296$ ,  $(\text{M}+\text{Na})^+=318$ .

5

### Example 39

Preparation of (4S)-5-ethoxy-4-[[[(4-methylphenyl)sulfonyl]amino]-5-oxopentanoic acid

This material was prepared by substantially following the procedure in Example 38 except that p-toluenesulfonyl chloride was used in place of n-butylsulfonyl chloride in Step A.

MS(PES):  $(\text{M}+\text{H})^+=330$ ,  $(\text{M}+\text{Na})^+=352$ .

### Example 40

Preparation of (4S)-4-[[[(benzyloxy)carbonyl]amino]-5-ethoxy-5-oxopentanoic acid

To 5-(*tert*-butyl) 1-ethyl (2S)-2-[[[(benzyloxy)carbonyl]amino]pentanedioate (5.0 gms) (obtained from Example 36, Step A) was added 40%TFA in  $\text{CH}_2\text{Cl}_2$  (15 mls) at room temperature under argon and stirring was continued overnight. The solvent was removed under reduced pressure thus affording the desired acid (4.2 gms, 100%)

MS(PES):  $(\text{M}+\text{H})^+=310$ .

Example 41

Preparation of 2-(4-{(2-([4-pyridyl]-2,8-diazaspiro[4.5]dec-8-yl)carbonyl)piperazino)-acetic acid

- 5 Step A: Preparation of 4-nitrophenyl 4-(2-ethoxy-2-oxoethyl)-1-piperazine carboxylate

- 10 1-(Ethoxy carbonylmethyl)-piperazine (11.61 mmol) in  $\text{CH}_2\text{Cl}_2$  (10 mL) was added dropwise to a mixture of 4-nitrophenyl chloroformate (15.10 mMol) and DIEA (45 mMol) in the same solvent (15.0 mL). The pale yellow solution was warmed to room temperature and then stirred there overnight. Concentration of the reaction mixture yielded the crude product, which was purified by flash chromatography (82%).

- 15 Step B: Preparation of Ethyl 2-(4-{[(2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)-carbonyl]-piperazino)acetate

- 20 The 4-nitrophenyl carbamate from Step A (0.325 mMol) was mixed with the spirocyclic piperidine (0.32 mmol, Step C, Example 28), and DIEA (2.0 mmol), and the mixture was heated to 75 °C for ca. 20 h. The mixture was then partitioned between  $\text{CH}_2\text{Cl}_2$  and sodium bicarbonate. Evaporation of the  $\text{CH}_2\text{Cl}_2$  extract yielded the crude product, which was purified by RP-HPLC (52%).

- Step C: Preparation of 2-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-piperazino)acetic acid

- 25 The ethyl ester (0.25 mMol) from Step B was dissolved in THF (10 mL) and treated with 1M LiOH (0.50 mMol), and stirred at room temperature for ca. 4h. Then it was

acidified at 0 °C with 1N HCl, and concentrated. The crude product was purified by RP-HPLC (69%).

MS: (M+H)<sup>+</sup> = 388.

PRP (IC<sub>50</sub>) = 8.925 μM

ELISA (IC<sub>50</sub>) = 0.252 μM.

5

#### Example 42

Preparation of 3-oxo-3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1,4-diazepan-1-yl)propanoic acid

- 10 Step A: Preparation of benzyl 4-(3-ethoxy-3-oxopropanoyl)-1,4-diazepane-1-carboxylate

- 15 Benzyl 1,4-diazepane-1-carboxylate (769 mg, 3.28 mmol) was suspended in DMF (8 ml) and DIEA (1.14 ml, 6.56 mmol) was added, followed by ethyl 3-bromopropionate (624 mg, 3.45 mmol) and the mixture was stirred at room temperature overnight. After evaporation of the solvent under reduced pressure, the residue was extracted with CH<sub>2</sub>Cl<sub>2</sub> versus saturated NaHCO<sub>3</sub> and then the organic layers were combined and dried over MgSO<sub>4</sub>, filtered and evaporated. The crude was filtered through a silica plug and concentrated to yield the title compound as a light colored oil (765 mg, 70%).

- 20 MS (ES) (M+H)<sup>+</sup> = 335

Step B: Preparation of ethyl 3-(1,4-diazepan-1-yl)-3-oxopropanoate

- 25 The benzyl ester from Step A (765 mg) was dissolved in EtOH (20 ml), 5% Pd/C (100 mg) was added and the mixture was placed on the Parr hydrogenator at 50 psi H<sub>2</sub> pressure

for 1 hr. The reaction was filtered through celite and evaporated under reduced pressure to yield 450 mg (98%) of the title compound.

5      Step C:      Preparation of 4-nitrophenyl 4-(3-ethoxy-3-oxopropanoyl)-1,4-diazepane-1-carboxylate

10      The amine from Step B (400 mg, 2.0 mmol) was dissolved in  $\text{CH}_2\text{Cl}_2$  (20 ml) with DIEA (0.87 ml, 2.3 mmol) and cooled to 0 °C. Then p-nitrophenyl chloroformate (523 mg, 2.53 mmol) was added and the reaction was stirred 2 hr, then extracted  $\text{CH}_2\text{Cl}_2$  versus saturated  $\text{NaHCO}_3$ , dried on  $\text{MgSO}_4$ , filtered and evaporated. Purification by column chromatography yielded the title compound as a yellowish oil (0.544 mg, 75%).

MS (ES)  $(\text{M}+\text{H})^+ = 366$

15      Step D:      Preparation of ethyl 3-oxo-3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1,4-diazepan-1-yl)propanoate

20      2-(4-pyridyl)-2,8-diazaspiro[4.5]decane (109 mg, 0.334 mmol) was suspended in DMF (3 ml) with DIEA (0.35 ml, 2.0 mmol), heated to 70 °C and the carbamate from Step C (184 mg, 0.50mmol) was added. Heated to 95-100 °C for 24 hr. Evaporated off DMF in vacuum, then extracted with  $\text{CH}_2\text{Cl}_2$  versus saturated  $\text{NaHCO}_3$  and combined the organic layers. Dried them on  $\text{MgSO}_4$ , filtered and evaporated. Purified by RP-HPLC to yield the title compound (80 mg).

MS (ES)  $(\text{M}+\text{H})^+ = 444$

25      Step E:      Preparation of the title compound

This compound was hydrolyzed by substantially following the procedure from Example 44, Step E to afford 22.6 mg of the title compound as a white fluffy solid.

MS (ES)  $(\text{M}+\text{H})^+ = 417$

PRP=3.675  $\mu$ MELISA=0.176  $\mu$ MExample 43

- 5 Preparation of 3-oxo-3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1,4-diazepan-1-yl)propanoic acid

- 10 Step A: Preparation of Benzyl 4-(3-ethoxy-3-oxopropanoyl)-1,4-diazepane-1-carboxylate

- 15 A mixture of N-Cbz-homopiperazine (4.268 mMol) and DIEA (8.60 mMol) in  $\text{CH}_2\text{Cl}_2$  (15.0 mL) at 0 °C was treated with ethyl malonyl chloride (5.077 mMol). The solution was stirred at room temperature overnight. The reaction mixture was then partitioned between  $\text{CH}_2\text{Cl}_2$  and  $\text{NaHCO}_3$ . The title compound was obtained by evaporation of the  $\text{CH}_2\text{Cl}_2$  extract. It was purified by flash chromatography (91%).

- 20 Step B: Preparation of Ethyl 3-(1,4-diazepan-1-yl)-3-oxopropanoate

- 25 The compound from Step A (3.60 mMol) was dissolved in ethanol (25 mL),  $\text{Pd}(\text{OH})_2$  (5% by weight) was added, and the mixture was shaken on a Parr hydrogenator at 30 psi of hydrogen for ca. 4 h. The title compound was obtained by filtration, and concentration (93%).

- Step C: Preparation of 4-nitrophenyl 4-(3-ethoxy-3-oxopropanoyl)-1,4-diazepane-1-carboxylate

A solution of the acylated homo-piperazine analog from Step B (2.61 mMol) and DIEA (6.30 mMol) in  $\text{CH}_2\text{Cl}_2$  (20 mL) was treated with 4-nitrophenyl chloroformate (3.175 mMol). The mixture was then stirred at room temperature overnight. The reaction mixture was concentrated and chromatographed to yield the title compound (76%).

Step D: Preparation of Ethyl 3-oxo-3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1,4-diazepan-1-yl)propanoate

The 4-nitrophenyl carbamate from Step C (0.395 mMol), tricyclic piperidine from Step C, Example 28, (0.325 mMol), and DIEA (1.72 mMol) in DMF (5.0 mL) was heated to 75 °C for 20 h. The mixture was then partitioned between  $\text{CH}_2\text{Cl}_2$  and  $\text{NaHCO}_3$ . The title compound was obtained by evaporation of the  $\text{CH}_2\text{Cl}_2$  extract. It was purified by flash chromatography (52%). MS: ES  $(\text{M}+\text{H})^+ = 458$ .

Step E: Preparation of 3-oxo-3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1,4-diazepan-1-yl)propanoic acid

The ethyl ester from Step D (0.20 mMol) was dissolved in THF (7.0 mL) and treated with 1M LiOH (0.45 mL), and stirred at room temperature for ca. 5h. Then it was acidified at 0 °C with 1N HCl, and concentrated. The title compound was obtained by RP-HPLC purification (71%).

MS: ES  $(\text{M}+\text{H}-\text{CO}_2)^+ = 386$ .

PRP  $(\text{IC}_{50}) = 0.697 \mu\text{M}$

ELISA  $(\text{IC}_{50}) = 0.025 \mu\text{M}$ .

Example 44

Preparation of 2-[(1-{2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl}carbonyl)-4-piperidyl]oxy]acetic acid

Step A: Preparation of *tert*-butyl 4-(2-ethoxy-2-oxoethoxy)-1-piperidine carboxylate

10

*tert*-Butyl-4-hydroxy-1-piperidine carboxylate (3.0 mMol) in  $\text{CH}_2\text{Cl}_2$  (5.0 mL) was mixed with rhodium diacetate dimer (0.05 mMol), and treated with ethyl diazoacetate (4.0 mMol) in  $\text{CH}_2\text{Cl}_2$  (10.0 mL). After the addition was complete the mixture was stirred for another 2 h. It was then filtered and concentrated to yield the title compound (76%).

15

Step B: Preparation of Ethyl 2-(4-piperidyloxy)acetate

The *tert*-butoxycarbonyl compound from Step A (2.50 mMol) in  $\text{CH}_2\text{Cl}_2$  (5.0 mL) at 0 °C was treated with TFA (5.0 mL). After 1 h at 0 °C the mixture was concentrated to yield the title compound.

20

Step C: Preparation of 4-nitrophenyl 4-(2-ethoxy-2-oxoethoxy)-1-piperidine carboxylate

25

To a solution of piperidine from Step B (2.5 mMol) and DIEA (10 mMol) in  $\text{CH}_2\text{Cl}_2$  (10 mL) at 0 °C was added 4-nitrophenyl chloroformate (2.8 mMol) in  $\text{CH}_2\text{Cl}_2$  (10.0 mL).

The yellow solution was stirred at room temperature for 19 h and then concentrated. The title compound was obtained by flash chromatography (72%).

Step D: Preparation of ethyl 2-[(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-4-piperidyl)oxy]acetate

The 4-nitrophenyl carbamate from Step C (0.20 mMol) was mixed with the spirocyclic piperidine (0.20 mMol, from Step C, Example 28), and DIEA (1.0 mMol), and the mixture was heated to 75 °C for 18 h. The mixture was then partitioned between CH<sub>2</sub>Cl<sub>2</sub> and satd. NaHCO<sub>3</sub>. Evaporation of the CH<sub>2</sub>Cl<sub>2</sub> extract yielded the title compound which was purified by RP-HPLC (56%).

Step E: Preparation of 2-[(1-{2-(4-pyridinyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-4-piperidyl)oxy]acetic acid

The ethyl ester from Step D (0.15 mMol) was treated with 2N HCl (5.0 mL) at room temperature. After 4.0 h, the mixture was concentrated and the crude was purified by RP-HPLC to afford the title compound.

MS: ES (M+H)<sup>+</sup> = 403

PRP (IC<sub>50</sub>) = 3.785 μM

ELISA (IC<sub>50</sub>) = 0.138 μM.

#### Example 45

Preparation of 2-[(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-4-piperidyl)-methoxy]acetic acid

Step A: Preparation of 4-piperidylmethanol

- 4-pyridylcarbinol (5.05 g, 45.8 mmol) dissolved in EtOH (75 ml) and concentrated HCl (3.81 ml, 45.8 mmol) was added. The starting material precipitated out and H<sub>2</sub>O was added until compound dissolved again (~10 ml), then PtO<sub>2</sub> (1 g) was added. Stirred under H<sub>2</sub> pressure (220 psi) overnight.. The catalyst was filtered off and the solvent evaporated under reduced pressure to yield the slightly impure title compound (7.53 g, quantitative). This material was carried on directly to the next step without purification.

Step B: Preparation of benzyl 4-(hydroxymethyl)-1-piperidinecarboxylate

10

- Dissolved the amine (5.0 g, 45.8 mmol) from Step A in CH<sub>2</sub>Cl<sub>2</sub> (50 ml) with TEA (22.5 ml, 158.6 mmol) and cooled to 0°C, then added benzyl chloroformate (10.4 ml, 73.3 mmol) and stirred at room temperature ca. 24 hr. Extracted CH<sub>2</sub>Cl<sub>2</sub> versus saturated NaHCO<sub>3</sub> and combined the organic layers, dried on MgSO<sub>4</sub>, filtered and evaporated. Purified by flash chromatography to yield the pure title compound (3.34 g, 42%). MS (APCI) (M+H)<sup>+</sup>=250

15

Step C: Preparation of benzyl 4-[(2-ethoxy-2-oxoethoxy)methyl]-1-piperidine carboxylate

20

- Dissolved the alcohol (3.5 g, 13.35 mmol) from Step B in CH<sub>2</sub>Cl<sub>2</sub> (25 ml), then added rhodium diacetate dimer (30 mg, .067 mg) to the solution, followed by the dropwise addition of ethyl diazoacetate (1.5 ml, 14.7 mmol). N<sub>2</sub> gas evolved as the reaction proceeded. Filtered the reaction through celite and removed solvent on the rotary evaporator, then purified by flash chromatography to yield the pure title compound (3.5 g, 78%).

25

Step D: Preparation of ethyl 2-(4-piperidylmethoxy)acetate

30

Dissolved the N-benzyl compound from Step C in EtOH (100 ml), added 5% Pd/C Degussa catalyst (400 mg), and stirred overnight under H<sub>2</sub> pressure (200 psi). Filtered through celite and evaporated under reduced pressure to yield a cream colored crystalline compound (2.25 g, quantitative).

5

Step E: Preparation of 4-nitrophenyl 4-[(2-ethoxy-2-oxoethoxy)methyl]-1-piperidinecarboxylate

10 The material from Step D (2.19 g, 10.88 mmol) was converted to the p-nitrophenyl carbamate by substantially following the procedure from Example 44, Step C. The compound was flash column purified to afford 2.42 g (61%) of the title compound.

MS (APCI) (M+H)<sup>+</sup>=367

15 Step F: Preparation of ethyl 2-[(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-4-piperidyl)methoxy]acetic acid

20 Part of the carbamate material from Step E (200 mg, 0.55 mmol) was reacted with 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane from Step C, Example 28, (116 mg, 0.46 mmol) by substantially following the procedure from Example 44, Step D to afford 80 mg (40%) of the title compound.

MS (APCI) (M+H)<sup>+</sup>= 445

25 Step G: Preparation of the title compound

The compound from Step F (80 mg) was hydrolyzed by substantially following the procedure from Example 44, Step E to afford 20 mg (27%) of the title compound.

PRP=2.824 μM

ELISA=0.106 μM

30

Example 46

Preparation of 2-[methyl(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-4-piperidyl)amino]acetic acid

5

Step A: Preparation of 2-[(1-benzyl-4-piperidyl)(methyl)amino]acetic acid

10 Dissolved N-benzyl 4-piperidone (2.0 g, 10.57 mmol) in 1,2 dichloroethane (10 ml) and added sarcosine (0.97 g, 10.57 mmol), which did not dissolve. Added acetic acid (0.63 ml, 10.57 mmol) and TEA (1.84 ml, 10.57 mmol) and checked pH=4. Stirred room temperature 24 hr, then evaporated the solvent under reduced pressure and suspended the solids with 0.1% TFA to break apart borate salts. RP-HPLC purified and lyophilized to yield the title compound as a fluffy white powder (2.74 g, 99%).

15 MS (ES) (M+H)<sup>+</sup>=263

Step B: Preparation of ethyl 2-[(1-benzyl-4-piperidyl)(methyl)amino]acetate

20

Dissolved the acid from Step A in EtOH (100 ml) and cooled to 0°C, then added thionyl chloride (9.90 ml, 135 mmol) dropwise over 30 minutes. A thick white precipitate formed, which was resuspended by the addition of EtOH (40 ml). Evaporated the solvent under reduced pressure, extracted CH<sub>2</sub>Cl<sub>2</sub> versus saturated NaHCO<sub>3</sub>, combined the organic layers, dried over MgSO<sub>4</sub>, filtered and evaporated. RP-HPLC purified the crude and lyophilized to yield pure title compound as a fluffy white solid (1.58 g, quantitative).

25

Step C: Preparation of ethyl 2-[methyl(4-piperidyl)amino]acetate

Dissolved the N-benzyl compound from Step B (1.37 g, 3.44mmol) in MeOH (10 mls), then added 10% Pd/C (200 mg) and placed under H<sub>2</sub> pressure (800 psi) o.n.. The catalyst was removed by filtration and MeOH was evaporated to yield 1.13 g the title compound as an oil.

5 MS (ES) (M+H)<sup>+</sup>=201

Step D: Preparation of 4-nitrophenyl 4-[(2-ethoxy-2-oxoethyl)(methyl)amino]-1-piperidinecarboxylate

10

The material from Step C (1.13g, 5.65 mmol) was converted to the p-nitrophenyl carbamate by substantially following the procedure from Example 44, Step C. The compound was RP-HPLC purified to afford 0.56 g of the title compound.

MS (ES) (M+H)<sup>+</sup>=366

15

Step E: Preparation of ethyl 2-[methyl(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-4-piperidyl)amino]acetate

20 Part of the material from Step D (210 mg, 0.5 mmol) was reacted with 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane from Step C, Example 28, by substantially following the procedure from Example 44, Step D to afford the ester of the title compound (50 mg).

MS (ES) (M+H)<sup>+</sup>=444

25 Step F: Preparation of the title compound

This compound was hydrolyzed by substantially following the procedure from Example 44, Step E to afford 16.6 mg of the title compound as a white fluffy solid.

MS (ES) (M+H)<sup>+</sup>=417

30 PRP=9.999 μM

Example 47

Preparation of 3-oxo-3-[(1-{2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl}carbonyl)-tetrahydro-1H-3-pyrrolyl]amino]propanoic acid

5

Step A: Preparation of Ethyl 3-[(1-benzyltetrahydro-1H-3-pyrrolyl)amino]-3-oxopropanoate

10

The reaction mixture comprising of 1-Benzyl-3-amino pyrrolidine (17.0 mMol), and DIEA (40.0 mMol) in DMF (20.0 mL) at 0 °C, was treated with ethyl malonyl chloride (21.0 mMol). The clear solution was stirred at room temperature for 17 h. The reaction was quenched with satd. NaHCO<sub>3</sub>, and extracted with EtOAc. Concentration of the EtOAc extract yielded the title compound (91%).

15

Step B: Preparation of Ethyl 3-oxo-3-(tetrahydro-1H-3-pyrrolylamino)propanoate

20

The N-benzyl pyrrolidine derivative from Step A (15 mMol) in EtOH (30.0 mL) was mixed with 20% Pd(OH)<sub>2</sub>/C (500 mg) and the mixture was shaken on Parr hydrogenator at 50 psi of hydrogen for 20 h. It was then filtered and the clear filtrate was concentrated to yield the title compound as a colorless glue (93%).

25

Step C: Preparation of 4-nitrophenyl 3-[(3-ethoxy-3-oxo-propanoyl)amino]-1-pyrrolidinecarboxylate

A mixture of pyrrolidine from Step B (5.0 mMol) and DIEA (30.0 mMol) in CH<sub>2</sub>Cl<sub>2</sub> (20.0 mL) at 0 °C was treated with 4-nitrophenyl chloroformate (6.0 mMol) in the same

solvent (5.0 mL). The clear pale yellow solution was stirred at room temperature for 18 h. Then all the solvents were rotavapped off and the crude product was purified by flash chromatography to afford the title compound (81%).

- 5 Step D: Preparation of Ethyl 3-oxo-3-[(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}tetrahydro-1H-3-pyrrolyl)amino]propanoate

- 10 The reaction mixture comprising of 4-nitrophenyl carbamate (0.40 mMol) from Step C, spirocyclic piperidine from Step C, Example 28, (0.40 mMol), and DIEA (2.0 mMol) in DMF (5.0 mL) was heated to 75 °C for 20 h. It was then partitioned between CH<sub>2</sub>Cl<sub>2</sub> and NaHCO<sub>3</sub>. Concentration of the CH<sub>2</sub>Cl<sub>2</sub> extract yielded the title compound. It was purified by RP-HPLC (49%).  
MS: ES (M+H)<sup>+</sup> = 444.

- 15 Step E: Preparation of 3-oxo-3-[(1-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-tetrahydro-1H-3-pyrrolyl)amino]propanoic acid

The ethyl ester from Step D (0.240 mMol) in THF (7.0 mL) was treated with 1M LiOH (0.50 mMol). After 4.0 h at rt, the mixture was acidified with 1N HCl at 0 °C and concentrated. The title compound was obtained by RP-HPLC purification (76%).

- 20 MS: ES (M+H)<sup>+</sup> = 417.

PRP (IC<sub>50</sub>) = 5.856 μM

ELISA (IC<sub>50</sub>) = 0.447 μM.

#### Example 48

- 25 Preparation of 3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-piperidino)-butanoic acid

- Step A: Preparation of Benzyl 1-(3-ethoxy-1-methyl-3-oxopropyl)-4-piperidine carboxylate

- 5 Benzyl 4-piperidinecarboxylate (1.26 g, 3.78 mmol), ethyl acetoacetate (1.44 ml, 11.35 mmol), sodium triacetoxyborohydride (2.4 g, 11.4 mmol), acetic acid (0.216 ml, 5.68 mmol) and TEA (1.98 ml, 11.35 mmol) were dissolved together in 1,2 dichloroethane (5 ml). The solution was adjusted to pH 5 with acetic acid and stirred at room temperature ca. 24 hr, at which time starting material was absent by RP-HPLC. The solution was treated with 0.1% TFA in water to break apart borate salts, extracted  $\text{CH}_2\text{Cl}_2$ , dried on  $\text{MgSO}_4$ , filtered, evaporated and purified by flash chromatography to yield pure title compound (331 mg, 26%).

- 10 Step B: Preparation of 1-(3-ethoxy-1-methyl-3-oxopropyl)-4-piperidinecarboxylic acid

- 15 The benzyl ester from Step A (507 mg) was dissolved in Ethanol (30 ml). 10% Pd/C (100 mg) was added and the mixture was placed on the Parr hydrogenator at 50 psi  $\text{H}_2$  pressure for 3 hr. Filtered reaction through celite and washed the catalyst with EtOH, then evaporated the solvent under reduced pressure to yield the pure title compound (368 mg, quantitative).

MS (ES)  $(\text{M}+\text{H})^+ = 244$

- 20 Step C: Preparation of ethyl 3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperidino)butanoate

- 25 Suspended 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane from Step C, Example 28, (106 mg, 0.324 mmol) in anhyd. DMF (3 ml) with DIEA (0.56 ml, 3.2 mmol) and checked that pH=10. Added acid from Step B (95 mg, 0.39 mmol), followed by HBTU (185 mg, 0.49 mmol), at which time the suspension dissolved and turned dark reddish. Stirred 2 hr at room temperature, until RP-HPLC analysis showed absence of the starting piperidine,

then evaporated DMF in vacuo, extracted  $\text{CH}_2\text{Cl}_2$  versus saturated  $\text{NaHCO}_3$ , combined the organic layers and dried on  $\text{MgSO}_4$ , filtered and evaporated. Purified by RP-HPLC to yield the pure title compound (110 mg, 77%).

MS (ES)  $(\text{M}+\text{H})^+ = 443$

5

Step E: Preparation of the title compound

This compound was hydrolyzed by substantially following the procedure from Example 44, Step E to afford 6 mg of the title compound as a white fluffy solid.

10 MS (ES)  $(\text{M}+\text{H})^+ = 415$

#### Example 49

15 Preparation of 3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperidino)-propanoic acid

Step A: Preparation of benzyl 1-(3-ethoxy-3-oxopropyl)-4-piperidinecarboxylate

20

A mixture of 4-Benzyl-1-(*tert*-butyl)1,4-piperidinedicarboxylate from Step A, Example 12 (2.90 mMol), ethyl 3-bromo-propionate (3.20 mMol), and DIEA (30 mMol) in DMF (10.0 mL) was stirred at room temperature for 22 h. It was then washed with 1 N HCl, brine, dried, and concentrated to yield a light brown glue which was purified by flash chromatography to afford the title compound (68%).

25

Step B: Preparation of 1-(3-ethoxy-3-oxopropyl)-4-piperidinecarboxylic acid

A mixture of the benzyl ester from Step A (2.0 mMol) and 20% Pd(OH)<sub>2</sub>/C (200 mg) in ethyl acetate (20 mL) was shaken on a Parr hydrogenator at 50 psi of H<sub>2</sub>. It was then filtered and concentrated to yield the title compound as a colorless glue (91%).

5

Step C: Preparation of ethyl 3-(4-{(2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl)carbonyl}-piperidino)propanoate

10 A mixture of the carboxy acid from Step B (0.340 mMol), spirocyclic piperidine from Step C, Example 28, (0.30 mMol), HBTU (0.40 mMol), and DIEA (3.0 mMol) in DMF (5.0 mL) was stirred at room temperature for 19 h. It was then diluted with CH<sub>2</sub>Cl<sub>2</sub> (20 mL) and washed with satd. NaHCO<sub>3</sub>, brine, dried, and concentrated to yield the crude product. It was purified by RP-HPLC to afford the title compound (66%).

15

Step D: Preparation of 3-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperidino)-propanoic acid

20 The ethyl ester from Step C (0.150 mMol) was suspended in 2N HCl (10 mL) and stirred at room temperature for 5 h. It was then concentrated and purified by RP-HPLC to afford the title compound.

MS: ES (M+H)<sup>+</sup> = 401

ELISA (IC<sub>50</sub>) = 0.017 μM.

25

### Example 50

Preparation of 2-[(1-{2-oxo-2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]ethyl}-4-piperidyl)oxyl]acetic acid

30

Step A: Preparation of ethyl 2-({1-2[2-*tert*-butoxy]-2-oxoethyl}-4-piperidyl)oxy)acetate

5 A solution of ethyl 2-(4-piperidyloxy)acetate (7.05 mMol), *tert*-butyl bromoacetate (7.40 mMol), and DIEA (21.0 mMol) in DMF (15 mL) was stirred at room temperature for 18 hours. The mixture was then partitioned between CH<sub>2</sub>Cl<sub>2</sub> and saturated NaHCO<sub>3</sub>. The CH<sub>2</sub>Cl<sub>2</sub> extract was washed with brine, dried, and evaporated to yield the crude product which was purified by flash chromatography (85%).

10 Step B: Preparation of 2-[4-(2-ethoxy-2-oxoethoxy)piperidino]acetic acid

15 The *tert*-butyl ester (5.5 mMol) from Step A, at 0 °C, was treated with TFA (10 mL). After stirring at room temperature for 2.0 h the mixture was concentrated to yield the crude product.

Step C: Preparation of ethyl 2-[(1-{2-oxo-2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]ethyl}-4-piperidyl)oxy]acetate

20 A mixture of the carboxy acid from Step B (0.195 mMol), tricyclic piperidine from Step C, Example 28, (0.189 mMol), HATU (0.284 mMol), DIEA (0.946 mMol) in DMF (2.0 mL) was stirred at room temperature for 21 h. The mixture was partitioned between CH<sub>2</sub>Cl<sub>2</sub> and satd. NaHCO<sub>3</sub>, washed with brine, dried, and concentrated to yield the crude product which was purified by RP-HPLC to afford the title compound (76%).

Step D: Preparation of 2-[(1-{2-oxo-2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]ethyl}-4-piperidyl)oxyl]acetic acid

30 The ethyl ester from Step C (0.23 mMol) was treated with 2N HCl (10.0 mL) at rt. After 6.0 h, the mixture was concentrated and the crude was purified by RP-HPLC to afford the title compound (74%).

MS: ES (M+H)<sup>+</sup> = 417

PRP (IC<sub>50</sub>) = 80.00 μM

Example 51

5

Preparation of ethyl 2-[(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-piperidino)sulfonyl]acetic acid

10

Step A: Preparation of ethyl 2-chlorosulfonylacetate

15

Sodium 2-ethoxy-2-oxo-1-ethanesulfonate (3.52g, 18.53 mmol) and phosphorus pentoxide (4.6 g, 22 mmol) were placed in a round bottom flask with a condenser and stirred magnetically for 1 hr. A liquid resulted which was stirred 1 hr at rt, then 1 hr at 100 °C while a copious white precipitate of NaCl formed. The reaction was concentrated to dryness, dissolved in CH<sub>2</sub>Cl<sub>2</sub>, filtered through a silica plug, and concentrated to yield the title compound as a light yellow oil.

20

Step B: Preparation of benzyl 1-[(2-ethoxy-2-oxoethyl)sulfonyl]-4-piperidine carboxylate

25

Benzyl 4-piperidinecarboxylate (760 mg, 2.28 mmol) was dissolved in anhydrous CH<sub>2</sub>Cl<sub>2</sub> (20 ml) and DIEA (2.38 ml, 13.72 mmol) and cooled to 0 °C. Then ethyl 2-chlorosulfonylacetate (1.02 g, 5.48 mmol) from Step A was added slowly and the solution was stirred 5 hr as it came to rt. Extracted solution with CH<sub>2</sub>Cl<sub>2</sub> versus saturated NaHCO<sub>3</sub>, dried on MgSO<sub>4</sub>, filtered, evaporated and purified by flash chromatography to

30

yield the title compound (150 mg, 18%) as a colorless oil.

Step C: Preparation of 1-[(2-ethoxy-2-oxoethyl)sulfonyl]-4-piperidinecarboxylic acid

- 5 The benzyl ester from Step B (76 mg, 0.205 mmol) was dissolved in MeOH (20 ml) and 25 mg of 10% Pd/C was added and allowed to stir under a balloon of H<sub>2</sub> for 1 hr, then filtered and concentrated to yield pure title compound (67 mg, quantitative).

10 Step D: Preparation ethyl 2-[(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}piperidino)sulfonyl]acetate

- 15 Dissolved the acid from Step C in DMF (63 mg, 0.225 mmol) and added DIEA (0.18 ml, 1.02 mmol) and 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane (67 mg, 0.205 mmol), followed by HBTU (117 mg, 0.308 mmol). The solution turned reddish-orange and it was stirred o.n. at rt, then DMF was evaporated off and the crude was extracted with CH<sub>2</sub>Cl<sub>2</sub> versus saturated NaHCO<sub>3</sub>. The organic layers were combined and dried on MgSO<sub>4</sub>, filtered, evaporated, and purified by RP-HPLC to yield the pure title compound.

20 Step E: Preparation of the title compound

- The ester from Step D was dissolved in 5 ml of 2 N HCl and stirred for 24 hr room temperature until the reaction was complete by RP-HPLC. Lyophilized to dryness and purified the compound by RP-HPLC to yield pure title compound as a fluffy white solid (22 mg).

MS (ES) (M+H)<sup>+</sup> = 451

ELISA=0.094 μM

PRP (ADP-Citrate) IC<sub>50</sub> = 0.938 μM

### 30 Example 52

Preparation of 2-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl} phenoxy)-acetic acid

Step A: Preparation of benzyl 4-(2-ethoxy-2-oxoethoxy)-benzoate

To a mixture of benzyl 4-hydroxybenzoate (10.950 mMol) and rhodium acetate dimer (1.0 mMol) in  $\text{CH}_2\text{Cl}_2$  (40.0 mL) at room temperature was added a solution of ethyl diazoacetate (12.05 mMol) in  $\text{CH}_2\text{Cl}_2$  (20.0 mL) dropwise over 1.0 h. The mixture was stirred for another 2.0 h, filtered, and concentrated to yield the crude product which was purified by flash chromatography to afford the title compound. (72%).

Step B: Preparation of 4-(2-ethoxy-2-oxoethoxy)-benzoic acid

10

A mixture of the benzyl ester (8.0 mMol) from Step A and 20%  $\text{Pd}(\text{OH})_2/\text{C}$  (250 mg) in EtOH (50 mL) was shaken on Parr hydrogenator at 50 psi of  $\text{H}_2$  for 16 h. It was then filtered and concentrated to yield the crude product which was purified by flash chromatography to afford the title compound (91%).

15

Step C: Preparation of ethyl 2-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}phenoxy)acetate

A mixture of the carboxy acid from Step B (0.287 mMol), spirocyclic piperidine from Step C, Example 28, (0.221 mMol), EDC.HCl (0.507 mMol), HOBT (0.442 mMol), and DIEA (0.552 mMol) in DMF (5.0 mL) was stirred at room temperature for 19 h. It was then diluted with  $\text{CH}_2\text{Cl}_2$  and washed with satd.  $\text{NaHCO}_3$ , brine, dried, and concentrated to yield the crude product, which was purified by RP-HPLC to afford the title compound (79%).

20

Step D: Preparation of 2-(4-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}phenoxy)-acetic acid

25

The ethyl ester from Step C (0.180 mMol) was suspended in 2N HCl (10.0 mL) and stirred at room temperature for 5 h. It was then concentrated and purified by RP-HPLC to afford the title compound (73%).

MS: ES (M+H)<sup>+</sup> = 396.

5 ELISA (IC<sub>50</sub>) = 0.688 μM

PRP(ADP-Citrate) IC<sub>50</sub> = 11.285 μM

### Example 53

Preparation of 2-(5-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1H-1-indolyl)acetic acid

10

Step A: Preparation of 1-(2-*tert*-butoxy-2-oxoethyl)-1H-5-indolecarboxylic acid

15

To Sodium hydride (6.87 mMol) in DMF (5.0 mL) at 0 °C was added a solution of Indole-4-carboxylic acid (3.10 mMol) in DMF (4.0 mL). The thick colorless suspension was stirred at 0 °C for 1.0 h and treated with a solution of *tert*-butyl bromoacetate (3.20 mMol) in DMF (1.0 mL). The mixture was warmed to room temperature and then stirred there o.n. The reaction was quenched with 1M citric acid at 0 °C, and extracted with CH<sub>2</sub>Cl<sub>2</sub>. The title compound was obtained by concentration of the CH<sub>2</sub>Cl<sub>2</sub> extract (64%).

20

Step B: Preparation of *tert*-butyl 2-(5-{[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-1H-1-indolyl)acetate

25

4-Carboxy-indole-N-ethyl acetate from Step A (0.398 mMol) was mixed with the spirocyclic piperidine from Step C, Example 28, (0.39 mMol), HBTU (0.79 mMol), and DIEA (1.72 mMol) in DMF (4.0 mL). The solution was then stirred at room temperature for 18 h. The reaction was quenched with satd. NaHCO<sub>3</sub> and extracted with CH<sub>2</sub>Cl<sub>2</sub>. The

title compound was obtained by evaporation of the  $\text{CH}_2\text{Cl}_2$  extract, followed by flash chromatography (80%).

Step C: Preparation of 2-(5-([2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl)-1H-1-indolyl)acetic acid

- 5 The *tert*-butyl ester from Step B was treated with TFA (5.0 mL) at rt. After 2.0 h the mixture was concentrated to yield the title compound which was purified by RP-HPLC (81%).

MS: ES  $(\text{M}+\text{H})^+ = 419$ .

PRP (ADP-Citrate)  $\text{IC}_{50} = 0.952 \mu\text{M}$

ELISA ( $\text{IC}_{50}$ ) = 0.047  $\mu\text{M}$ .

10

#### Example 54

Preparation of 2-[2-({2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]acetyl}amino)-1,3-thiazol-4-yl]acetic acid

15

Step A: Preparation of ethyl 2-[2-({2-[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]acetyl}amino)-1,3-thiazol-4-yl]acetate

20

- Suspended 2-(4-pyridyl)-2,8-diazaspiro[4.5]decane from Step C, Example 28, (106 mg, 0.324 mmol) in anhydrous 1,2 dichloroethane with DIEA (0.16 ml, 0.92 mmol), added ethyl 2-(2-chloroacetamido)-4-thiazoleacetate (52 mg, 0.199 mmol) and stirred o.n. at rt. Evaporated the solvent, extracted  $\text{CH}_2\text{Cl}_2$  versus saturated  $\text{NaHCO}_3$ , combined the organic layers and dried over  $\text{MgSO}_4$ , filtered and evaporated. Purified by RP-HPLC to yield of pure title compound (6.7 mg, 10%).

25

MS (ES)  $(\text{M}+\text{H})^+ = 444$

30 Step B: Preparation of the title compound

The compound from Step A (6.7 mg) was hydrolyzed by substantially following the procedure from Example 51, Step E to afford 3.9 mg (62%) of the title compound as a white fluffy solid.

MS (ES) (M+H)<sup>+</sup>=417

5 PRP (ADP-Citrate) IC<sub>50</sub> = 32.072 μM

ELISA IC<sub>50</sub> = 2.280 μM

### Example 55

10 Preparation of 3-({[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}amino)propanoic acid

Step A: Preparation of ethyl 3-({[2-(4-pyridyl)-2,8-diazaspiro[4.5]dec-8-yl]carbonyl}-amino)propanoate

15

2-(4-pyridyl)-2,8-diazaspiro[4.5]decane from Step C, Example 28, (36 mg, 0.11 mmol) was suspended in CH<sub>2</sub>Cl<sub>2</sub> (2 ml) and DIEA (0.077ml, 0.44 mmol), then cooled to 0°C and reacted with ethyl 3-isocyanatopropionate (21 mg, 0.143 mmol) room temperature o.n.. Evaporated solvent and purified by RP-HPLC to yield pure title compound (42 mg, 20 quantitative).

MS (DCI) (M+H)<sup>+</sup>=361

Step B: Preparation of the title compound

The compound from Step A (80 mg) was hydrolyzed by substantially following the procedure from Example 51, Step E to afford 20 mg (27%) of the title compound.

25 MS (DCI) (M+H)<sup>+</sup>=333

PRP IC<sub>50</sub> (ADP-Citrate)= 34.63 μM

ELISA IC<sub>50</sub> = 28.9 μM

The following assay methods are suitable for evaluating the compounds of the invention.

30 No. 1 - The ELISA IIb-IIIa Assay:

In the following assay, GPIIb-IIIa is prepared in purified form, by a method such as described by Fitzgerald, L.A., et al., Anal Biochem (1985) 151:169-177, (the disclosure of which is incorporated herein by reference).

5 GPIIb-IIIa is coated onto microtiter plates. The coated support is then contacted with fibrinogen and with the test material (e.g., compounds of Formula I) and incubated for a sufficient time to permit maximal binding of fibrinogen to the immobilized GPIIb-IIIa. Fibrinogen is typically provided at a concentration of about 5-50 nM and the test material can, if desired, be added at a series of dilution. Typical incubations are 2 to 4 hours at 25 °C, the time and temperature being interdependent.

10 After incubation, the solution containing the fibrinogen and test material is removed and the level of binding of fibrinogen measured by quantitating bound fibrinogen to GPIIb-IIIa. Any suitable means of detection may be used, but it is convenient to employ labeled fibrinogen, for example using biotinylated labels. Such methods are well known in the art.

15

A. Description of Assays--Plate Assays

Purified platelet GPIIb-IIIa receptor was prepared as described by Fitzgerald, L.A., et al., Anal Biochem (1985) 151:169-177 (1985). Vitronectin receptor was prepared as described by Smith, J.W., J. Biol Chem (1988) 263:18726-18731. After purification, the receptors were stored in 0.1% Triton X-100 at 0.1-1.0 mg/ml.

25 The receptors were coated to the wells of 96-well flat-bottom ELISA plates (Linbro EIA-Plus microtiter plate, Flow Laboratories) after diluting 1:200 with a solution of 20 mM Tris-HCl, 150 mM NaCl, 1 mM CaCl<sub>2</sub>, pH 7.4, to reduce the Triton X-100 concentration to below its critical micellar concentration and adding an aliquot of 100 ul to each well. The wells were all allowed to incubate overnight at 4 °C, and then aspirated to dryness. Additional sites were blocked by the addition of bovine serum albumin (BSA) at 35 mg/ml in the above buffer for two hours at 30 °C to prevent nonspecific binding. The wells were then washed once with binding buffer (50 nM Tris-HCl, 30 100 mM NaCl 2 mM CaCl<sub>2</sub>, 1 mg/ml BSA).

The corresponding ligands (fibrinogen, von Willebrand Factor, or vitronectin) were conjugated to biotin using commercially available reagents and standard protocols. The labeled ligands were added to the receptor-coated wells at final concentration of 10

nM (100 ul/well) and incubated for 3 hours at 25 °C in the presence or absence of the test samples. After incubation, the wells are aspirated to dryness and bound ligand is quantitated.

5 The bound protein is detected by the addition of antibiotin antibody conjugated to alkaline phosphatase followed by addition of substrate (p-nitrophenyl phosphate), and determination of the optical density of each well at 405 nM. Decreased color development is observed in wells incubated with test samples which inhibit binding of ligand to receptor.

#### 10 No. 2 - The Platelet Aggregation Assay

In addition to the ELISA IIb-IIIa assay previously described the Aggregation-Human PRP/ADP Assay is useful for evaluating therapeutic compounds.

15 Platelet-rich plasma was prepared from healthy human volunteers for use in determining inhibition of platelet aggregation by the compounds. Blood was collected via a 21-gauge butterfly cannula, using a two-syringe technique into 1/10 volume of 3.8% trisodium citrate.

Platelet-rich plasma was prepared at room temperature by centrifugation of the citrated whole blood at 100 x g for twelve minutes. The platelet rich plasma contained approximately 200-400,000 platelets/ $\mu$ l.

20 Platelet-poor plasma was prepared by centrifugation of citrated whole blood at 12,000 x g for 2 minutes.

25 Platelet aggregation was assayed in a 4-channel platelet aggregation profiler (PAP-4, Biodata, Hatboro, PA) according to the manufacturers directions. Inhibition of platelet aggregation was studied by adding varying amounts of adenosine diphosphate (ADP) to stirred human platelet-rich plasma. Specifically, the human platelet-rich plasma was incubated with the compound being tested for 1 minute at 37 °C prior to the addition of a variety of aggregating agents most often ADP 5  $\mu$ M to 20  $\mu$ M, but also 1  $\mu$ g/ml collagen, 1  $\mu$ M U46619 and 0.3  $\mu$ M platelet activating factor.

#### 30 Pharmaceutical Compositions

Pharmaceutical formulations containing compounds of the invention can be administered orally in the form of tablets, capsules, solutions, emulsions or suspensions,

inhaled liquid or solid particles, as a spray, through the skin by an appliance such a transdermal patch (such as described in US Patents No. 5,296,222 and 5,271,940, the disclosures of which are incorporated herein by reference) or rectally, for example, in the form of suppositories. The lipophilic prodrug derivatives of the invention are particularly well suited for transdermal absorption administration and delivery systems. Administration can also take place parenterally, for example in the form of injectable solutions.

Tablets are prepared by mixing the Active Ingredient ("Active Ingredient" is one or more spirocyclic bicyclic compounds of the invention inclusive of those corresponding to formulae I) with pharmaceutically inert, inorganic or organic carriers, diluents, and/or excipients. Examples of such excipients which can be used for tablets, are lactose, maize starch or derivatives thereof, talc, stearic acid or salts thereof. Examples of suitable excipients for soft gelatin capsules are vegetable oils, waxes, fats, semisolid and liquid polyols.

Suitable excipients for the preparation of solutions and syrups are water, polyols, sucrose, invert sugar and glucose.

Suitable excipients for injectable solutions are water, alcohols, polyols, glycerol and vegetable oils.

These pharmaceutical products can additionally contain preservatives, solubilizers, stabilizers, wetting agents, emulsifiers, sweeteners, colorants, flavorings, buffers, coating agents and antioxidants.

Pharmaceutical compositions of this invention for parenteral injection comprise pharmaceutically-acceptable sterile aqueous or nonaqueous solutions, dispersions, suspensions or emulsions as well as sterile powders for reconstitution into sterile injectable solutions or dispersions just prior to use.

The Active Ingredient can also be made in micro-encapsulated form.

Exemplary formulations using the Active Ingredient are described below:

30

#### Formulation 1

Hard gelatin capsules are prepared using the following ingredients:

	(mg/capsule)
Active Ingredient	250.0
Starch	305.0
Magnesium stearate	5.0

- 5        The above ingredients are mixed and filled into hard gelatin capsules in 560 mg quantities.

#### Formulation 2

A tablet formula is prepared using the ingredients below:

	(mg/tablet)
Active Ingredient	250.0
Cellulose, microcrystalline	400.0
Colloidal silicon dioxide	10.0
Stearic acid	5.0

- 15        The components are blended and compressed to form tablets, each weighing 665 mg.

#### Formulation 3

- 20        A dry powder inhaler formulation is prepared containing the following components:

	Weight %
Active ingredient	5
Lactose	95

- 25        The active mixture is mixed with the lactose and the mixture is added to a dry powder inhaling appliance.

#### Formulation 4

- 30        Tablets, each containing 60 mg of active ingredient, are prepared as follows:

	(milligrams)
Active ingredient	60.0
Starch	45.0

	Microcrystalline cellulose	35.0
	Polyvinylpyrrolidone (10% solution in water)	4.0
	Sodium carboxymethyl starch	4.5
5	Magnesium stearate	0.5
	Talc	1.0
	Total	150.0

10 The active ingredient, starch and cellulose are passed through a No. 20 mesh U.S. sieve and mixed thoroughly. The solution of polyvinylpyrrolidone is mixed with the resultant powders, which are then passed through a 16 mesh U.S. sieve. The granules as produced are dried at 50-60°C and passed through a 16 mesh U.S. sieve. The sodium carboxymethyl starch, magnesium stearate, and talc, previously passed through a No. 30 mesh U.S. sieve, are then added to the granules which, after mixing, are compressed on a  
15 tablet machine to yield tablets each weighing 150mg.

#### Formulation 5

Capsules, each containing 80 mg of medicament are made as follows:

		(milligrams)
20	Active ingredient	80.0
	Starch	109.0
	Magnesium stearate	1.0
	Total	190.0

25 The active ingredient, cellulose, starch, and magnesium stearate are blended passed through a No. 20 mesh U.S. sieve, and filled into hard gelatin capsules in 190 mg quantities.

#### Formulation 6

30 Suppositories, each containing 225 mg of active ingredient are made as follows:

Active Ingredient	225 mg
Saturated fatty acid glycerides to	2000 mg

The active ingredient is passed through a No. 60 mesh U.S. sieve and suspended in the saturated fatty acid glycerides previously melted using the minimum heat

necessary. The mixture is then poured into a suppository mold of nominal 2.0 g capacity and allowed to cool.

#### Formulation 7

Suspensions, each containing 50 mg of medicament per 5.0 mL dose are made as follows:

5	Active ingredient	50.0 mg
	Xanthan gum	4.0 mg
	Sodium carboxymethyl cellulose	(11%)
	Microcrystalline cellulose	(89%) 50.0 mg
10	Sucrose	1.75 g
	Sodium benzoate	10.0 mg
	Flavor	q.v.
	Color	q.v.
	Purified water to	5.0mL

15 The medicament, sucrose and xanthan gum are blended, passed through a No. 10 mesh U.S. sieve, and then mixed with a previously made solution of the microcrystalline cellulose and sodium carboxymethyl cellulose in water. The sodium benzoate, flavor, and color are diluted with some of the water and added with stirring. Sufficient water is then added to produce the required volume.

#### 20 Formulation 8

Capsules, each containing 150 mg of medicament, are made as follows:

		(milligrams)
	Active ingredient	150.0
	Starch	407.0
25	Magnesium stearate	3.0
	Total	560.0

The active ingredient, cellulose, starch, and magnesium stearate are blended, passed through a No. 20 mesh U.S. sieve, and filled into hard gelatin capsules in 560 mg quantities.

#### 30 Methods of Treatment

This invention provides a method of preventing or treating thrombosis in mammals, especially humans, which method comprises administering to the human or

mammal a therapeutically effective amount of the compounds of this invention. The platelet aggregation inhibitors of the invention are useful therapeutically to prevent thrombus formation. Indications appropriate to such treatment include, without limitation, atherosclerosis and arteriosclerosis, acute myocardial infarction, chronic  
5 unstable angina, transient ischemic attacks and strokes, peripheral vascular disease, arterial thrombosis, preeclampsia, embolism, restenosis and/or thrombosis following angioplasty, carotid endarterectomy, anastomosis of vascular grafts, and chronic cardiovascular devices (e.g., in-dwelling catheters or shunts "extracorporeal circulating devices"). These syndromes represent a variety of stenotic and occlusive vascular  
10 disorders thought to be initiated by platelet activation on vessel walls.

The PAIs may be used for prevention or abortion of arterial thrombus formation, in unstable angina and arterial emboli or thrombosis, as well as treatment or prevention of myocardial infarction (MI) and mural thrombus formation post MI. For brain-related disorders, treatment or prevention of transient ischemic attack and treatment of  
15 thrombotic stroke or stroke-in-evolution are included.

The PAIs may also be used for prevention of platelet aggregation, embolization, or consumption in extracorporeal circulations, including improving renal dialysis, cardiopulmonary bypasses, hemoperfusions, and plasmapheresis.

PAIs prevent platelet aggregation, embolization, or consumption associated with  
20 intravascular devices, and administration results in improved utility of intraaortic balloon pumps, ventricular assist devices, and arterial catheters.

The PAIs will also be useful in treatment or prevention of venous thrombosis as in deep venous thrombosis, IVC, renal vein or portal vein thrombosis, and pulmonary venous thrombosis.

25 Various disorders involving platelet consumption, such as thrombotic thrombocytopenic purpura are also treatable.

In addition, the PAIs of the present invention may be used in numerous nontherapeutic applications where inhibiting platelet aggregation is desired. For example, improved platelet and whole blood storage can be obtained by adding sufficient  
30 quantities of the compounds, the amount of which will vary depending upon the length of proposed storage time, the conditions of storage, the ultimate use of the stored material, etc.

Preferably, the compounds of this invention are administered in the form of a pharmaceutical formulation. Thus, the compounds of this invention may be administered  
35 orally, parenterally, topically, rectally and etc., in, appropriate dosage units, as desired.

The term parenteral as used herein includes subcutaneous, intravenous, intraarterial, injection or infusion techniques, without limitation. The term, "topically" encompasses administration rectally and by inhalation spray, as well as the more common routes of the skin and the mucous membranes of the mouth and nose.

- 5        Actual dosage levels of active ingredients in the pharmaceutical compositions of this invention may be varied so as to administer an amount of the active compound(s) that is effective to achieve the desired therapeutic response for a particular patient.

- 10        The selected dosage level will depend upon the activity of the particular compound, the route of administration, the severity of the condition being treated, and the condition and prior medical history of the patient being treated. However, it is within the skill of the art to start doses of the compound at levels lower than required to achieve the desired therapeutic effect and to gradually increase the dosage until the desired effect is achieved. If desired, the effective daily dose may be divided into multiple doses for purposes of administration, e.g., two to four separate doses per day. It will be  
15        understood, however, that the specific dose level for any particular patient will depend upon a variety of factors including the body weight, general health, diet, time and route of administration, combination with other drugs and the severity of the particular disease being treated.

- 20        The range of therapeutic dosages is from about 0.01 to about 10,000 milligrams per day, with from 1 to 300 milligrams being preferred.

Many modifications and variations of this invention may be made without departing from its scope, as is apparent to those skilled in the art. The specific embodiments described herein are offered by way of example only, and the invention is to be limited only by the terms of the appended claims.

CLAIMS:

1. A compound of formula (I) or a pharmaceutically acceptable salt, solvate, or prodrug thereof:

5

wherein;

the spirocycle nucleus A/B is selected from the group consisting of:

one of the "a" and "b" attachment points of the spirocyclic nucleus is attached to a ring carbon atom on the pyridyl group while the other is attached to the R<sub>3</sub> group, and

R<sub>2</sub> is a R<sub>10</sub> group if the "a" attachment point is attached to the pyridyl group, otherwise R<sub>2</sub> is a R<sub>0</sub> group;

5 R<sub>10</sub> is the same or different and is a non-interfering substituent independently selected from hydrogen, alkyl, halosubstituted alkyl, alkenyl, alkynyl, cycloalkyl, aryl, arylalkyl, hydroxy, alkoxy, arylalkoxy, amino, substituted amino, carbamoyl, carboxy, acyl, cyano, halo, nitro, sulfo, =O, or =S, with the proviso that only one R<sub>10</sub> may be =O or =S;

10 m is a number from zero to 9;

R<sub>0</sub> is the same or different and is a non-interfering substituent independently selected from hydrogen, alkyl, halosubstituted alkyl, alkenyl, alkynyl, cycloalkyl, aryl, arylalkyl, hydroxy, alkoxy, arylalkoxy, amino, substituted amino, carbamoyl, carboxy, acyl, cyano, halo, nitro, sulfo, =O, or =S, with the proviso that only one R<sub>0</sub> may be =O or =S;

15 n is a number from zero to 9;

X is a substituent selected from the group consisting of hydrogen, halo, -C<sub>1-6</sub>alkyl, C<sub>1-6</sub>alkoxy, C<sub>2-6</sub>alkenyl, C<sub>2-6</sub>alkynyl, C<sub>3-8</sub>cycloalkyl, C<sub>0-4</sub>alkylC<sub>3-8</sub>cycloalkyl, -CN, -NO<sub>2</sub>, -(CH<sub>2</sub>)<sub>j</sub>-N(-R<sup>a</sup>, -R<sup>b</sup>), -C(=O)-N(-R<sup>a</sup>, -R<sup>b</sup>), -S(=O)<sub>2</sub>-N(-R<sup>a</sup>, -R<sup>b</sup>), -S(=O)<sub>2</sub>-R<sup>a</sup>, -CF<sub>3</sub>, and

20 -(CH<sub>2</sub>)<sub>j</sub>-O-R<sup>a</sup>;

wherein

R<sup>a</sup> and R<sup>b</sup> are independently selected from the group consisting of H, -C<sub>1-6</sub>alkyl, C<sub>1-6</sub>alkoxy, C<sub>2-6</sub>alkenyl, C<sub>2-6</sub>alkynyl, C<sub>3-8</sub>cycloalkyl, C<sub>0-6</sub>alkylC<sub>3-8</sub>cycloalkyl, and -C<sub>0-6</sub>alkyl-(carbocyclic aryl), wherein from 0-4 hydrogen atoms on the ring atoms of the carbocyclic aryl moiety may be independently replaced with a member selected from the group consisting of halo, C<sub>1-4</sub>alkyl, C<sub>2-6</sub>alkenyl, C<sub>2-6</sub>alkynyl, C<sub>3-8</sub>cycloalkyl, C<sub>0-4</sub>alkylC<sub>3-8</sub>cycloalkyl, -CN, -CF<sub>3</sub> and -NO<sub>2</sub>; and

25 j is a number from 0 to 2;

and

30 R<sub>3</sub> is an acidic group containing one or more acid radicals.

35

2. A spirocyclic compound according to Claim 1, wherein the A/B nucleus is selected from the group consisting of:

and

3. A spirocyclic compound according to Claim 1, wherein the A/B nucleus is selected from the group consisting of:

4. A spirocyclic compound according to Claim 1, wherein the A/B nucleus is selected from the group consisting of:

5. The compound of claim 4 wherein the "a" attachment point of the spirocyclic nucleus is attached to the pyridyl group.

6. The compound of claim 4 wherein the "b" attachment point of the spirocyclic nucleus is attached to the pyridyl group.

10

7. The compound of Claim 1 wherein:  
the pyridyl radical is a member selected from the group consisting of:

15 and X is a member selected from the group consisting of hydrogen, lower alkyl, halogen and trihalomethyl.

8. The compound of Claim 2 wherein:  
the pyridyl radical is a member selected from the group consisting of:

and X is a member selected from the group consisting of hydrogen, lower alkyl, halogen and trihalomethyl.

5

9. The compound of Claim 3 wherein:  
the pyridyl radical is a member selected from the group consisting of:

10 and X is a member selected from the group consisting of hydrogen, lower alkyl, halogen and trihalomethyl.

10. The compound of Claim 4 wherein:  
wherein the pyridyl radical is a member selected from the group consisting of:

15

and X is a member selected from the group consisting of hydrogen, lower alkyl, halogen and trihalomethyl.

11. The compound of Claim 10 wherein the pyridyl radical is:

12. The compound of Claim 11 wherein the pyridyl radical is:

13. The compound of Claim 1 wherein  $R_3$  is  $\text{CO}_2R_5$ ,  $(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$ ,  $\text{CO}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$ , or  $\text{CONH}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$ , wherein  $R_5$  is hydrogen,  $\text{C}_1\text{-C}_6$  alkyl, aryl, or substituted aryl.

14. The compound of Claim 1 wherein  $R_3$  is  $(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CH}(\text{NHR}_4)\text{CO}_2R_5$ ,  $\text{CO}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CH}(\text{NHR}_4)\text{CO}_2R_5$ , or  $\text{CONH}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CH}(\text{NHR}_4)\text{CO}_2R_5$ ,

wherein  $R_4$  is  $\text{SO}_2(\text{C}_1\text{-C}_6 \text{ alkyl})$ ,  $\text{SO}_2$  aryl, or  $\text{SO}_2$  substituted aryl; and  $R_5$  is hydrogen,  $\text{C}_1\text{-C}_6$  alkyl, aryl, or substituted aryl.

15. The compound of Claim 4 wherein  $R_3$  is  $\text{CO}_2R_5$ ,  $(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$ ,  $\text{CO}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$ , or  $\text{CONH}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$  wherein  $R_5$  is hydrogen,  $\text{C}_1\text{-C}_6$  alkyl, aryl, or substituted aryl.

16. The compound of Claim 4 wherein  $R_3$  is  $(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CH}(\text{NHR}_4)\text{CO}_2R_5$ ,  $\text{CO}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CH}(\text{NHR}_4)\text{CO}_2R_5$ , or  $\text{CONH}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CH}(\text{NHR}_4)\text{CO}_2R_5$ ,

wherein  $R_4$  is  $\text{SO}_2(\text{C}_1\text{-C}_6 \text{ alkyl})$ ,  $\text{SO}_2$  aryl, or  $\text{SO}_2$  substituted aryl; and  $R_5$  is hydrogen,  $\text{C}_1\text{-C}_6$  alkyl, aryl, or substituted aryl.

17. The compound of Claim 5 wherein  $R_3$  is  $\text{CO}_2R_5$ ,  $(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$ ,  $\text{CO}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$ , or  $\text{CONH}(\text{C}_1\text{-C}_6 \text{ alkyl})\text{CO}_2R_5$  wherein  $R_5$  is hydrogen,  $\text{C}_1\text{-C}_6$  alkyl, aryl, or substituted aryl.

18. The compound of Claim 5 wherein R<sub>3</sub> is (C<sub>1</sub>-C<sub>6</sub> alkyl)CH(NHR<sub>4</sub>)CO<sub>2</sub>R<sub>5</sub>, CO(C<sub>1</sub>-C<sub>6</sub> alkyl)CH(NHR<sub>4</sub>)CO<sub>2</sub>R<sub>5</sub>, or CONH(C<sub>1</sub>-C<sub>6</sub> alkyl)CH(NHR<sub>4</sub>)CO<sub>2</sub>R<sub>5</sub>,

wherein R<sub>4</sub> is SO<sub>2</sub>(C<sub>1</sub>-C<sub>6</sub> alkyl), SO<sub>2</sub> aryl, or SO<sub>2</sub> substituted aryl; and R<sub>5</sub> is  
5 hydrogen, C<sub>1</sub>-C<sub>6</sub> alkyl, aryl, or substituted aryl.

19. The compound of Claim 13 wherein R<sub>5</sub> is hydrogen.

20. The compound of Claim 14 wherein R<sub>5</sub> is hydrogen.

21. The compound of Claim 15 wherein R<sub>5</sub> is hydrogen.

10 22. The compound of Claim 16 wherein R<sub>5</sub> is hydrogen.

23. The compound of Claim 17 wherein R<sub>5</sub> is hydrogen.

24. The compound of Claim 18 wherein R<sub>5</sub> is hydrogen.

25. A compound of Claim 1 selected from the group consisting of:

15

- wherein  $n'$  is a number from 1 to 6;  $m'$  is a number from 1 to 2;  $R'$  is selected from the group consisting of  $\text{CO}_2$ -alkyl,  $\text{CO}_2$ -aryl,  $\text{SO}_2$ -alkyl,  $\text{SO}_2$ -aryl and  $\text{SO}_2$ -heteroaryl;  $R''$  is selected from the group consisting of alkyl, alkenyl, alkoxy, acyl, cycloalkyl, aryl, heteroaryl, which is substituted or unsubstituted; and  $R'''$  is selected from the group consisting of hydrogen, hydroxy, alkyl or substituted alkyl, or a pharmaceutically acceptable salt, solvate, or prodrug thereof.

10

26. A composition for inhibiting the binding of fibrinogen to blood platelets in a mammal, comprising a compound of any one of Claims 1 to 25 and a pharmaceutically-acceptable carrier.

15

27. A composition for inhibiting the aggregation of blood platelets in a mammal, comprising a compound of any one of Claims 1 to 25 and a pharmaceutically-acceptable carrier.

28. A composition for preventing or treating thrombosis in a mammal, comprising a compound of any one of Claims 1 to 25 and a pharmaceutically-acceptable carrier.

20

29. A method for inhibiting the binding of fibrinogen to blood platelets in a mammal, which comprises administering to the mammal a composition of Claim 26.

30. A method for inhibiting the aggregation of blood platelets in a mammal, which comprises administering to the mammal a composition of Claim 27.

31. A method for preventing or treating thrombosis in a mammal, which comprises administering to the mammal a composition of Claim 28.

5 32. A composition for treating a mammal, including man, to alleviate the pathological effects of atherosclerosis, arteriosclerosis, acute myocardial infarction, chronic stable angina, unstable angina, transient ischemic attacks and strokes, peripheral vascular disease, arterial thrombosis, preeclampsia, embolism, restenosis following angioplasty, carotid endarterectomy, and anastomosis of vascular grafts, comprising a  
10 compound of any one of Claims 1 to 25 and a pharmaceutically-acceptable carrier.

33. A method of treating a mammal, including man, to alleviate the pathological effects of atherosclerosis, arteriosclerosis, acute myocardial infarction, chronic stable angina, unstable angina, transient ischemic attacks and strokes, peripheral  
15 vascular disease, arterial thrombosis, preeclampsia, embolism, restenosis following angioplasty, carotid endarterectomy, and anastomosis of vascular grafts; wherein the method comprises administering to said mammal at least one compound as claimed in any one of Claims 1 to 25; wherein, said compound is administered to said mammal in an amount sufficient to inhibit binding of fibrinogen on glycoprotein IIb-IIIa sites in said  
mammal to thereby alleviate said effects.

20 34. A pharmaceutical formulation containing as an active ingredient a compound as claimed in any one of Claims 1 to 25, associated with one or more pharmaceutically-acceptable carriers therefor.

35. The use of a compound as claimed in any one of Claims 1 to 25 for the manufacture of a medicament for the treatment of atherosclerosis, arteriosclerosis, acute  
25 myocardial infarction, chronic stable angina, unstable angina, transient ischemic attacks and strokes, peripheral vascular disease, arterial thrombosis, preeclampsia, embolism, restenosis following angioplasty, carotid endarterectomy, and anastomosis of vascular grafts.

36. The use of a compound as claimed in any one of Claims 1 to 25 for the  
30 manufacture of a medicament for the treatment of thrombosis.

ance Notes on Codes and Abbreviations" appearing at the begin-  
ning of each regular issue of the PCT Gazette.

WO 01/30780 A3

(54) Title: PYRIDYL-CONTAINING SPIROCYCLIC COMPOUNDS AS INHIBITORS OF FIBRINOGEN-DEPENDENT  
PLATELET AGGREGATION

(57) Abstract: This invention relates to certain substituted or unsubstituted pyridyl-containing spirocyclic compounds substituted  
with both basic and acidic functionality, which are useful in inhibition of platelet aggregation.

# INTERNATIONAL SEARCH REPORT

International Application No.

PLT/US 00/29804

**A. CLASSIFICATION OF SUBJECT MATTER**  
 IPC 7 C07D471/10 A61K31/438 A61P9/00 C07D413/14 C07D401/04  
 //(C07D471/10,221:00,209:00),(C07D471/10,221:00,221:00)

According to International Patent Classification (IPC) or to both national classification and IPC

## B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

IPC 7 C07D A61K A61P

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practical, search terms used)

EPO-Internal, WPI Data, CHEM ABS Data

## C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category *	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X	WO 97 11940 A (LILLY CO ELI ;COR THERAPEUTICS INC (US)) 3 April 1997 (1997-04-03) page 20, line 20; claims 1,28-30 -----	1,26-28

☐ Further documents are listed in the continuation of box C.

☒ Patent family members are listed in annex.

### \* Special categories of cited documents:

- \*A\* document defining the general state of the art which is not considered to be of particular relevance
- \*E\* earlier document but published on or after the international filing date
- \*L\* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- \*O\* document referring to an oral disclosure, use, exhibition or other means
- \*P\* document published prior to the international filing date but later than the priority date claimed

- \*T\* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
- \*X\* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
- \*Y\* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.
- \*G\* document member of the same patent family
